TB Awareness Month

Symptoms:

- Cough for longer than 2 weeks, which may be dry or productive
- Unexplained weight loss
- Fatigue
- Shortness of Breath
- Fever
- Night Sweats
- Loss of appetite

Treatment:

- TB treatment is free at clinics.
- TB can be cured if medication is taken as prescribed.

Prevent the spread by:

- Wash hands often to stop germs from spreading.
- Cover your nose and mouth when you cough or sneeze
- Open windows to allow the fresh air to flow through.
