

**NOTES: CONSULTATIVE ENGAGEMENT ON IMPROVING HEALTH TOWARDS UNIVERSAL HEALTH COVERAGE (UHC) IN THE WESTERN CAPE**

**Venue: ATKV Goudini Spa, Rawsonville**

**Date: 24 January 2020**

**08:30 – 14:15**

**Present and Apologies**

Attendees consisted of the following groups: the media; public and private hospital managers; advocacy groups; pharmaceutical companies; WCGH staff, municipalities who also serve on health facility boards and as district officers; NGO's; clinic committee members; hospital board members; senior clinicians; private hospital groups, health insurance groups, professional forums and Universities

Please refer to the annexure for a full list of attendees.

**1. Welcome and Purpose**

**Dr Beth Engelbrecht, Head of Health, Western Cape Government: Health (WCGH)**

Dr Engelbrecht opened the meeting and welcomed everyone.

She introduced the Western Cape MEC for Health, Minister Nomafrench Mbombo, who has a PHD in Nursing, practiced as a nurse, was previously a lecturer, and is the first black woman and nurse to serve in Cabinet.

**1.1. Dr Engelbrecht described the purpose of the day's session as follows:**

- a) To discuss the **health system** in the Western Cape Province and South Africa. In particular, what the 'shape, look and feel' should be for a health service that places people at the centre of care;
- b) To acknowledge the publication of the **National Health Insurance (NHI) Bill** in 2019, and the subsequent **public consultation hearings** that are scheduled to take place from February 2020 in the Western Cape.
- c) The forum serves as an opportunity to obtain a better understanding of the **difference between Universal Health Care (UHC) and NHI**, which will assist attendees with the necessary information in anticipation of the NHI public hearings.
- d) To share information about **the journey towards Universal Health Coverage** in the Western Cape Province.

**1.2. Designate Head of Health WCGH:**

Dr Engelbrecht introduced Dr Keith Cloete, who will be the new Head of the WCGH when Dr Engelbrecht exits her position by the end of March 2020. Dr Cloete has been the Chief of Operations for the WCGH for the past 5 years.

Dr Engelbrecht further welcomed the Mayor of the Breede Valley, Mr Levendal. Mr Levendal mentioned that he is happy to be here and thrilled to see the Department so active in the Breede Valley. He expressed his and his communities' sense of pride that the future HOD, Dr Cloete, is from the Breede Valley District.

2. Presentation: Clarify NHI and UHC, and the Departments Journey towards UHC

Dr Keith Cloete, Chief Operating Officer, WCGH

Dr Cloete presented and explained the different perspectives between NHI and UHC, and the departments approach on its journey towards UHC. Please refer to the PPHF website for the full presentation.

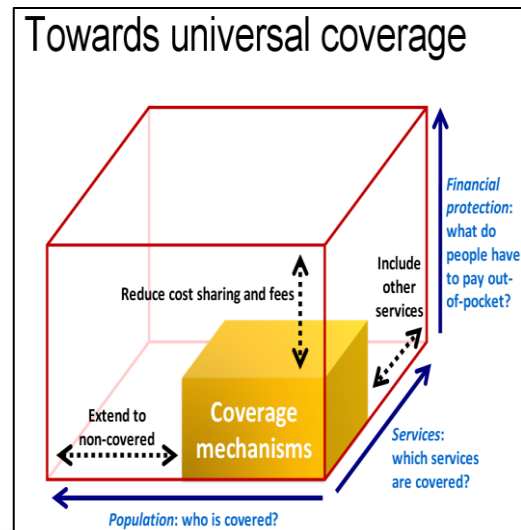

**Key points are as follows:**

**2.1. UHC overview**

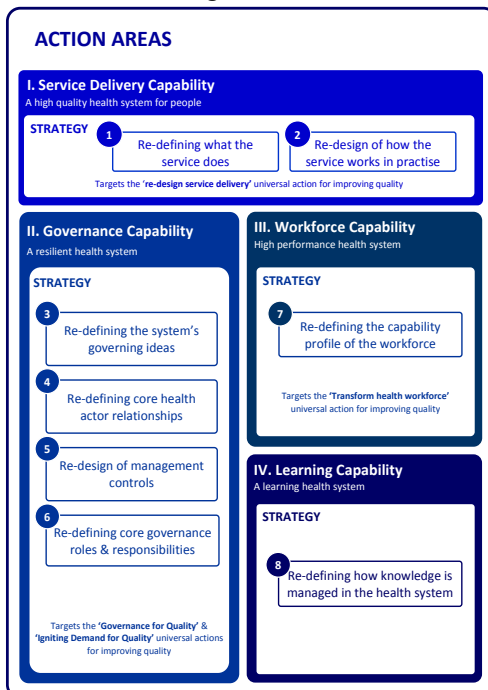

UHC is defined as to “Provide all people with access to needed health services of sufficient quality to be effective and to ensure that the use of these services does not expose the user to financial hardship”

(World Health Report 2010)

The 3D model represents aspects such as population coverage, service coverage and financial protection. **Population coverage** is required for the entire population, highlighting the need to reach all vulnerable people that are not covered. **Service coverage** refers to the services that are covered, highlighting the need to expand the range of services that are provided. **Financial protection** refers to reducing out-of-pocket payments, that consumes a big proportion of the household income.

**2.2. UHC Thinking Frame**

A healthcare system is very complex and interconnected which is why the WCGH applied various techniques to establish a thinking frame. The thinking frame has been applied and the consensus positions have been obtained for the governance roles. The action areas are listed below:

**2.2.1. Service Delivery Capability**

A high-quality health system for people

**2.2.2. Governance Capability**

A resilient health system

**2.2.3. People & Systems Capability**

High performance health system

**2.2.4. Learning Capability**

A learning health system

### 2.3. UHC position statement in relation to NHI

The UHC Thinking Frame provides a frame to clarify concepts and propose principles for action. The Department has applied this frame to develop a specific consensus position statement on governance roles, to inform the development of a coherent 5-year strategy.

- The Department will articulate the position statement clearly to the extended Departmental management and clinical team as well as external partners, in order to create shared purpose, values and vision.
- The UHC position statement on all 4 capability areas should be used to inform the contents of a 5-year strategy.

The Province supports a strong stewardship role from National as well as a collaborative stewardship role with the Province in the spirit of co-operative governance.

Dr Cloete discussed the similarities and current capabilities in relation to NHI.

He explained the way forward:

- Expand the UHC Position Statement to **include all the capabilities areas**.
- Prepare for **engagement and consultation with the broader management team** to develop and adopt a **Departmental UHC Position Statement** at the Departmental Indaba in February 2020.
- Develop the **5-yr Departmental Strategy**, derived from the **UHC position statement**.
- The Department will prepare for consultation with all **external partners** to develop and adopt a **Multi-stakeholder Western Cape UHC Position Statement**, during 2020.

### 2.4. COPC and WoSA strategy

- The WCGH closely studied UHC implemented in other countries over a period of 15 years. Dr Cloete noted that for effective service delivery, the most important aspect highlighted, is to strengthen primary care and community-based services. All sectors providing a healthcare service need to work together to provide coverage for all.
- This input integrates seamlessly into the departments current strategy to improve and expand COPC and WOSA strategy.

### 2.5. Concluding remarks

- Funding arrangements for UHC needs to be determined by the National Treasury.
- UHC will inform the WCGH's Strategy for the Department and the Province for the next five years.
- A more detailed presentation is available on the PPHF website.
- Dr Engelbrecht added that Dr Cloete's inputs of today will be included to the Department's Annual Indaba being convened in February 2020.

## 3. The NHI Bill (B11-2019) Summary

### Dr Beth Engelbrecht, Head of Health, Western Cape Government: Health (WCGH)

Dr Engelbrecht presented a summary of the NHI Bill, highlighting the following important points:

- That challenges exist with the current healthcare system and that there are valid reasons for health reform.
- The draft Bill removes functions and powers from Provinces to a National level.
- An inordinately big mandate of power is granted to the National Minister of Health.
- The role of Provinces will include Emergency Medical Services and Forensic Pathology Services. National Health Insurance may however still delegate duties/authority to Provinces.
- Central hospitals such as Groote Schuur and Tygerberg Hospitals, will report directly to the National Minister.
- Services will be free at the point of entry. The benefit package, however, must still be determined.
- Patients must enter at the primary healthcare (PHC) level and will follow referral pathways.
- Not all treatment will be funded
- All services will be contracted from a National level, vertically cutting across interconnected services.

- All planning will be done at a National level

Dr Engelbrecht urged the audience to attend the NHI public hearings and make their voices heard.

*Please refer to the PPHF website for the full presentation*

#### **4. UHC and NHI Panel Inputs:**

##### **4.1. Anthony John Vaughan: Vredenburg Hospital Facility Board**

Mr Vaughan presented the views of the Hospital Board. He mentioned that the purpose of NHI can only be achieved if the current health system is improved therefore UHC should happen first. NHI cannot be forced as the community is not ready yet. Currently 84% of the population is uninsured and is dependent on the 4,1% GDP allocation versus the 16% who have insurance and is dependent on the 4,4% of the GDP is spent on. When medical aid funds are depleted, then members go to public facilities. People do not realise the disaster that lies ahead with NHI since all complaints will have to be reported to NDOH. The NHI favours the metro district and disadvantages the rural district regarding specialist skills distribution. He concluded that one should stand up in numbers, and the NDOH will be forced to listen.

##### **4.2. Damaris Kiewiets: Community Liaison**

Ms Kiewiets stated that community participation has failed to be addressed. She further mentioned that she would like to see who the Department will be inviting in February 2020 engagements. Systems are created by people and the current system needs to be fixed first which is not happening. In this Province the problem is an absence of community voice in planning and in engagement and co-creation will fix this. The Department is aware of this problem because research has proven it. The WCGH is aware that the February 2020 NDOH engagements will affect the Western Cape and the 61,8 million people in the country. When the discussion is taking place around UHC and NHI, very little is mentioned of how the public sectors will be involved. As citizens, we should be accountable and have a purpose to engage on the questions asked from a place of knowing people's interests. Ms Kiewiets explained her issues were with service delivery but commended MEC Nomafrench Mbombo for visiting health facilities and ensuring that e.g. Wuppertal town has services in the town. Ms Kiewiets said that she is helping to make a difference, serving on Tygerberg Facility Board and feels that staff at the facilities can uplift the community as well. She explained it's not about people but the service that you render to people therefore a promise made must be kept and that today's session was very important and must be impactful. Dr Beth Engelbrecht commented that Ms Kiewiets speaks on behalf of the people and her views are in line with the WCGH.

##### **4.3. Yonela Kentane: People's Health Movement South Africa (PHMSA)**

Ms Kentane mentioned that the People's Health Movement of South Africa was founded by Louis Reynolds and David Sanders to prioritise community engagement for a health system for everyone. The organisation realised that Health is a foundation of human development and community makes up the third tier of the country. The NHI is pro public health whereby equity is key. PHMSA has viewed the Bill with the community and drew points from the Bill. Community engagement were used to build policy and make decisions. NHI is based on social solidarity and universality. Through engagements a few grey areas were found within the development and contents of the Bill. There seems to be a great influence from private sector which loses the focus on community and the people which should not be the case. The bill was silent about benefits for foreign nationals who pay taxes and impacts society. NHI ignores social determinants of health to ensure success. Will the Department be collaborating with other sectors of Government to ensure NHI is successful? Ms Kentane said that the one issue she has is that the National Minister of Health is mentioned countless times in the Bill. How can it be ensured to hold the National Minister accountable to the people's views of NHI and ensure that he doesn't push his own political agenda which might be contradictory to the Bill. NHI looks to also protect people using the private sector. The NHI should emphasise more on strengthening Primary Health Care (PHC) they look forward to this. Dr Engelbrecht commended Ms Kentane for doing well and the PHMSA for the work of the organisation.

**4.4. Lizette Phillips: WCGH**

Dr Phillips explained that she wanted to make a difference in her community when returning home to Worcester as a newly qualified Medical Practitioner and now as a Health Manager. Healthcare delivery in public and private sector is segregated and unsustainable. Health outcomes will not be improved for the population in the country. Finance mechanisms need to be reviewed from a justice and equity perspective. Healthcare needs to be provided for the people who actually need it. Finance is a huge aspect of access to health services and this is what NHI is trying to address. The physical location of healthcare facilities is also another aspect of access. Does that facility have the packages that the community needs and the staff skill set? The third aspect of access is the cultural expectations of everyone at the facility. If there isn't a match in these expectations; then the services will not be utilised. Dr Phillips mentioned that today's session is also to hear the expectations from the community in terms of what they want the health system to look like regarding equity access and quality. Healthcare 2030 makes provision for District Health Services to be the central pillar to strengthening the healthcare system in the Province at primary care level. Dr Engelbrecht highlighted the need to improve relationships, how to foster community engagement to strengthen the generation of ideas with the health system.

All attendees then moved in separate breakaway rooms for the group sessions facilitated by Departmental facilitators and scribes.

**5. Group Session Questions:**

**5.1. Describe what our health services should Look and Feel like to achieve Universal Health Coverage in our Communities?**

Dr Engelbrecht explained that the weight of the words captured for Question 1 was very similar across all 7 groups. She explained that the health system in the Prince and country must speak to these words above and what stood out for her was collective governance, patient-centred/person-centred, communities, the role that clinic committees play and importantly, public participation.

being reduced, lack of representation, fear of centralisation, non-inclusion, politically driven, voice of the community, and concern about bureaucracy came out as some of the critical words that came to the fore.

## 6. Closing Comments

Mr Mike Hofmeester, who is a health committee member from Bishop Lavis, noted that the session has given more clarity to the committee members who will now discuss NHI and UHC amongst themselves. He mentioned that they need National and Provincial Government to communicate and conclude their differences more speedily to reach an agreement. The timeframes between sessions to address this is very short and therefore encouraged the Department to consider having the sessions over two days in future. He further mentioned that there were no documents to look at before the event in order to be prepared. Dr Engelbrecht noted that it was the consistent theme from people today to receive documentation beforehand. The closing date for the submission of written comments for the NHI Bill was 29 November. Community consultation sessions will be on the following dates: 4; 5; 7 and 8 February 2020 in the Western Cape held by National Parliament Portfolio Committee.

Minister Nomafrench Mbombo thanked everyone in the Department who made the event possible and acknowledged everyone and their important roles. She mentioned that the Department is accountable to the Standing Committee for Health who forms part of Provincial Parliament. She acknowledged the Chairperson for that committee who is HIM member, Wendy Philander, who was previously the Mayco member for Drakenstein Municipality. She acknowledged the Breede Valley Mayor, Mr Levendal as well as the Deputy Mayor, Mr Swart. She acknowledged all the councillors of the Rural District Municipalities and the Metro District Municipality as well as Provincial Health Staff. She further acknowledged the community, NPO's, NGO's, Board Members, Committee Members and noted that each one plays an important role within the health system.

Today's session is the beginning and there will be further decentralised engagements that will reach everyone mentioned. She reiterated that the purpose of today was about NHI and UHC. UHC is to provide every human being with access to healthcare. Funding is a huge barrier in the delivery of health services. If more funding is not allocated to health services, then no additional resources can be added. The current health system needs to be fixed firstly before anything else can be done. Western Cape supports UHC and subscribe to the notion of a wellness society. The first step to deliver health services is to do it from a societal approach which includes Government, civil society and social society.

The current financing mechanism was not working and therefore the NHI fund was deemed a solution. Even though NHI is implemented, it cannot work in isolation therefore UHC will address the services. NHI information sessions have been hosted by National Parliament to grant the community opportunities to engage. Whether the NHI Bill will be passed or not, UHC will still be implemented. UHC will bring better access to services. The inputs of today will be included into the submission which will explain what UHC is for the Western Cape. Funding is dependent on National Treasury. The National Finance Minister has indicated that NHI is expensive therefore everyone is unsure if budgets will be reduced for the next year. An intervention approach should be done to see how to pilot UHC in certain areas based on the need, which packages should be available and that they are able to access it regardless of distance. There will be packages ranging from primary healthcare to specialist services. The Department will contribute towards the improvement of services with whatever resources is available. The inputs from this session will be shared with everyone who attended today.

According to the National Health Act, all statutory bodies are mandated to engage and feedback to their communities. Legislature makes provision for a public health day which can be used to share the information received today. The Forums in the metro already have their own platforms where this is done. The Councillors have representatives at each municipality that will feedback to the community. The Department has rolled out capacity building and training for hospital boards. The pilot will start again in the new financial year and be rolled out per district.

National Assembly will be hosting NHI public hearings. The Minister urged people to attend and engage at these sessions so that it goes on record. She advised everyone attending to make a stand that all inputs from these sessions must be made public and should be discussed at another open session. National Assembly committee members

## CONSULTATIVE ENGAGEMENT ON IMPROVING HEALTH TOWARDS UNIVERSAL HEALTH COVERAGE (UHC) IN THE WESTERN CAPE

requested that Parliament should not outsource recruits on NHI. More than 100 000 inputs were received on NHI. Minister noted that the view observed from most people is to fix the current health system first. She concluded by saying that: "Nothing about you without you."

Dr Cloete mentioned the way forward will be to consider 4 key points which is:

- 1) The NHI Bill participation process from National Assembly. There will be a process with the National Council of Provinces as well. This is an engagement process whereby the views of committee members can be heard directly as the Assembly is busy processing the Bill.
- 2) UHC development as a consultation process which is very important to the Department. This includes the inputs of UHC that was presented today. We need to embark on a process of consultation so that there is a unified strategy for the Province. It is owned by stakeholders and everyone can buy into that. It starts with a Department process in February 2020. The aim is to find the best possible way. Some community voices will be invited to be part of the process. The UHC consultation process needs to follow the structural arrangement that exists which is: from the district councils, then to the districts and to the communities.
- 3) Testing and trying new things towards UHC where there is already a footprint. This is linked to Community Orientated Primary Care (COPC) input. This is already being tested in four places and 16 rural areas. This process makes logical sense as a starting point. Districts and Provincial already has a process but the most important process is local.
- 4) How to recognise community participation as a regular interface? Minister has showed a way. It's important to have a gathering with the community within their home town. Therefore, the structure should be strong to reinforce channels. When attending the provincial gathering then the consultations should have taken place in the community already.

Dr Cloete concluded that he looks forward to taking this role for the next five years.

Dr Engelbrecht added that the focus should be to decentralise engagements. National Assembly engagement dates are as follows:

- West Coast District is Tuesday 4 Feb 2020 at Citrusdal from 16h30 to 20h30
- Metro District is Wednesday 5 Feb 2020 at Khayelitsha from 16h30 to 20h30
- Garden Route District is Friday 7 Feb 2020
- Central Karoo District is Saturday 8 Feb at 15h00

Dr Engelbrecht mentioned that the Cape Winelands and Saldanha Districts doesn't have dates. They can arrange to attend the sessions at the nearest area. Make your voice heard. Based on previous sessions in other provinces, there was a question and answer session and a few speakers. There is no second round of questions.

Michael Manning gave a vote of thanks to everyone who made the event possible and for to those who attended and provided inputs. He further thanked the additional groups not mentioned in other departments, friends and family who supported and allowed the attendees to be at the event, the organisers and ATKV staff. Gifts were given to the speakers and flowers were given to Dr Engelbrecht to thank her because this is her last meeting. The meeting closed at 14h30.

Speaker Presentations of the meeting is available on the PPHF webpage:
