Introduction

Regional profiles provide the Western Cape municipalities with valuable data and information which assist in planning, budgeting and the prioritisation of municipal services. It is acknowledged that municipalities across the Western Cape have different capacities and therefore will use the information in this publication to suit their own needs.

The 2015 Socio-economic Profiles builds upon the success of previous editions by providing updated information relating to demographics, education, health, poverty, safety and security, basic service delivery, economy, labour market and environmental management. New information has also been added in the form of ward specific basic service delivery statistics, broadband penetration rates as well as municipal specific Wi-Fi roll-out data.

The profile furthermore complements the socio-economic performance analysis of the Municipal Economic Review and Outlook (MERO) 2015 which was published in October 2015.

In all, the profile reflects the socio-economic reality of municipalities. As such, valuable insight can be gained as to the developmental challenges faced by communities residing within a specific geographical area.

This profile primarily uses data sourced from Statistics South Africa, administrative data from sector departments, the 2015 MERO and Quantec. The data sourced from sector departments are the most recent that is available. The latest survey data available at municipal level from Statistics South Africa include the 2011 Census. The updated population forecasts by the Department of Social Development will assist municipalities with future planning.

The information contained in this profile therefore highlights information for **George Municipality** in relation to the broader Western Cape Province.

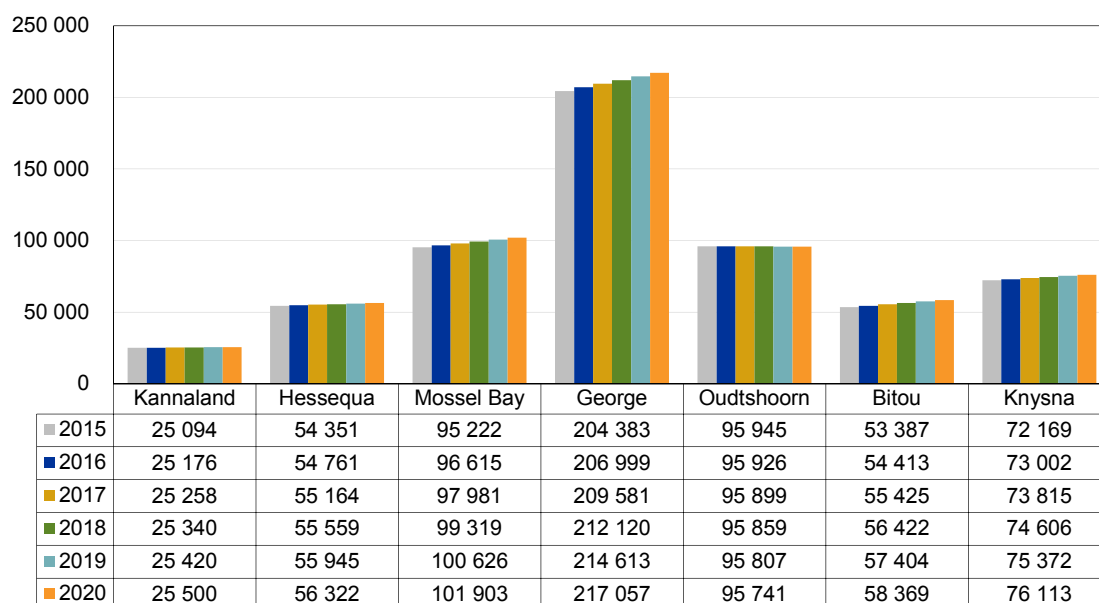

1. Demographics

1.1 Population

According to Census 2011 data, the Western Cape population grew at a rate of 2.6 per cent per annum between 2001 and 2011. This rate, which was higher than the national population growth rate of 1.5 per cent, can largely be attributed to an influx of individuals from other provinces that move to the Western Cape in search of job opportunities.

From this strong growth base, the Western Cape Department of Social Development was able to make population growth estimates for each municipality for the period 2015 - 2020. These projections will assist municipalities to align their budget allocations with basic service delivery priorities.

Figure 1 Eden District municipalities: Population projections, 2015 - 2020

Source: Western Cape Department of Social Development, 2015

Of the seven local municipalities within the Eden District, approximately 34 per cent (or 204 383) of the inhabitants reside in George. This total gradually increases over the 2015/16 MTREF years and is projected to reach 217 057 by 2020.

Figure 2 George: Population age cohort, 2015

Source: Western Cape Department of Social Development, 2015

Figure 2 reflects the population age distribution of George Municipality for 2015 and reveals that approximately 67 per cent of the 204 383 inhabitants of the Municipality are currently considered to be within the working age.

These figures also reveal that George has a total dependency ratio of 48.7 per cent in 2015. Higher dependency ratios imply greater strain on the working age to support their economic dependants (children and aged) and do not bode well for improved social security and enhanced economic growth.

Figure 3 reflects the population pyramids for George Municipality for 2015 and 2020 in the upper age cohorts in line with the provincial trend.

Figure 3 George: Population age distribution, 2015 and 2020

Source: Department of Social Development, 2015

The different age cohorts can typically be grouped into three main categories: Children (0 - 14 years); economically active population (15 - 64 years); and persons aged 65 years and older. These statistics provides important insights into the age groups, where the bulk of the population is located.

When comparing the shape of the two pyramids above it becomes evident that the composition of most of the age groups has remained the same between 2015 and 2020. Furthermore, it can be seen that the bulk of the population comprises children and young people between 0 - 39.

Please note: The Municipality is of the opinion that a comparison between 2015 and earlier years i.e. 2005, 2010 would have better reflected changing population dynamics. Provincial Treasury takes note of this recommendation and will in future incorporate backward and forward looking population comparisons.

1.2 Households

In addition to population projections, the projections on the number of households form the basis of municipal service delivery planning and essentially inform budget allocations towards basic services such as water, electricity, sanitation and refuse removal. It is therefore vital that for budget planning and implementation purposes a municipality rely on credible and accurate household estimates.

Table 1 Eden District: Household estimates, 2011 - 2015

Municipality	2011	2012	2013	2014	2015
Eden District	166 516	169 027	171 567	174 177	176 815
Kannaland	6 425	6 506	6 585	6 667	6 749
Hessequa	16 558	16 731	16 909	17 092	17 278
Mossel Bay	28 025	29 495	29 938	30 393	30 852
George	53 591	54 411	55 236	56 090	56 949
Oudtshoorn	22 683	22 976	23 274	23 574	23 878
Bitou	15 529	15 843	16 160	16 485	16 814
Knysna	22 667	23 065	23 465	23 876	24 295

Source: Quantec Research, 2015

Table 1 shows that the total number of households in the George Municipality was estimated to be 56 949 in 2015 (which equates to growth of 6.2 per cent, or 3 358 households, from 2011).

2. Education

Education and training improves access to employment opportunities and helps to sustain and accelerate overall development. It expands the range of options available from which a person can choose to create opportunities for a fulfilling life. Through having indirect positive effects on health and life expectancy, the level of education attained by an individual influences that individual's welfare.

2.1 Literacy

Literacy is used as a benchmark to measure some minimum level of educational attainment. *Literacy* is broadly defined as the ability to read and write; it is more strictly defined as the successful completion of a minimum of 7 years of formal education. Since most learners start school at the age of 7 years, the literacy rate is calculated as the proportion of those 14 years and older who have successfully completed a minimum of 7 years of formal education. The literacy rate in George in 2011 was 83.4 per cent, which is slightly below the Provincial average of 87.2 per cent.

2.2 Learner enrolment, the learner-teacher ratio and learner dropout rate

Population dynamics, which include knowledge of the current population profile and projected learner growth, provide a basis for sound educational planning. Knowledge of the number of learners enrolled at schools in a municipality (both at present and in the past) enables the Western Cape Education Department (WCED) to determine the extent of the demands placed on schools in the current year, as well as the demand anticipated in future years and plan accordingly. Having a sense of the exit points allows the WCED to plan more effectively with respect to Further Education and Training (FET). The learner-teacher ratio is very important as it is closely related to the amount of money spent per child and has a significant impact on learner educational outcomes.

Table 2 Eden District municipalities: Education indicators

Municipality	Learner enrolment		Dropout rate		Learner-teacher ratio	
	2013 (Gr 1 - 12 + LSEN)	ASS 2014	Average dropout rate 2012	Crude dropout rate using Yr 2013 - Gr 10 and Yr 2015 - Gr 12	Average learner-teacher ratio 2012	ASS 2014: ALL state+sgb+ substitutes teachers excl. practitioners and other
Kannaland	4 810	4 685	47.20%	39.40%	25.30	27.70
Hessequa	8 475	8 520	33.90%	21.20%	24.30	28.20
Mossel Bay	15 388	15 679	40.40%	29.00%	26.10	29.50
George	34 643	34 158	37.90%	31.60%	28.50	29.70
Oudtshoorn	18 836	18 860	26.60%	23.10%	29.00	30.00
Bitou	7 476	7 535	36.00%	26.70%	29.40	31.40
Knysna	11 946	11 728	36.50%	32.00%	24.50	31.10

Source: Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014

According to the Annual Survey of Public and Independent Schools (ASS) done by the WCED in 2014, learner enrolment in George decreased slightly from 34 643 in 2013 to 34 158 in 2014. The learner enrolment figures presented in 2013 are inclusive of learners with special education needs. The average school dropout rate in George was 37.9 per cent in 2012. The dropout rate measured amongst Grade 10 learners (in 2013) and Grade 12 learners (at the start of 2015) was 31.6 per cent, implying that one in every three Grade 10 and 12 learners in George dropped out of school before completing their schooling. The average learner-teacher ratio in George has increased from 28.5 per cent in 2012 to 29.7 per cent in 2014.

2.3 Education facilities

The availability of adequate education facilities such as schools, FET colleges and schools equipped with libraries and media centres could have a positive influence on academic outcomes. George had 51 schools in 2014 which had to accommodate 34 158 learners. The proportion of no fee schools has increased from 66.7 per cent in 2012 to 70.6 per cent in 2014, indicating that, given the challenging economic climate, there may be an upsurge in the number of parents being unable to afford school fees. In an effort to alleviate some of these funding challenges, the WCED offered certain fee-paying schools the option of becoming no fee schools. The majority of the schools in George are registered with the WCED as no fee schools.

George has 8 Public FET Colleges whose mandate is to ensure that education, training and skills development initiatives respond to the economy, rural development challenges and an informed and critical citizenry.

The number of schools in George with libraries or media centres decreased slightly from 32 in 2012 to 30 in 2014. Of the 51 schools in the Municipality, 21 remain without a library and/or media centre.

Table 3 Eden District municipalities: Education facilities, 2014

Municipality	Total number of schools	Number/proportion of no fee schools		Public FET colleges - main + sat	Education facilities: Number of schools with libraries/media centres	
	2014 Dec	2012	2014 Dec	ASS 2014 Lib	2012	2014

Knysna	20	65.00%	80.00%	4	15	15

Source: Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014

2.4 Educational outcomes (matric pass rate)

Education remains one of the key avenues through which the state participates in the economy. In preparing individuals for future engagement in the labour market, policy choices and decisions in the sphere of education play a critical role in determining the extent to which future economic and poverty reduction initiatives can be realised. The 2014 matric results for George were lower at 81.9 per cent from 89.2 per cent in 2013. This may be partly attributable to the Municipality's high learner to teacher ratio and stricter assessments and marking criteria used in the 2014 examinations.

Table 4 Eden District: Education outcomes, 2013 - 2014

Municipality	Education outcomes: Matric pass rate	
	2013	2014
Western Cape	84.70%	82.20%
Eden District	88.20%	81.50%
Kannaland	88.60%	85.30%
Hessequa	96.50%	85.90%
Mossel Bay	92.60%	83.00%
George	89.20%	81.90%
Oudtshoorn	89.40%	84.50%
Bitou	74.00%	73.90%
Knysna	81.10%	72.20%

Source: *Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014*

3. Health¹

Good health is vital to achieving and maintaining a high quality of life. A diverse range of factors play a role in ensuring the good health of communities and that disease, especially preventable and contagious/communicable ones, are kept at bay. Some of the factors include lifestyle features that depend on the provision of high quality municipal services, such as clean water, sanitation and the removal of solid waste.

The information provided by the Department of Health as detailed in this section, pertains only to public sector healthcare institutions. Any privately provided facilities or services are not reflected in the information below.

3.1 Healthcare services: Facilities and personnel

Access to healthcare facilities is directly dependent on the number and spread of facilities within a geographic space. South Africa's healthcare system is geared in such a way that people have to move from primary, with a referral system, to secondary and tertiary levels.

The Eden District has a range of primary healthcare facilities which includes 38 fixed clinics, 35 mobile/satellite clinics, 7 community day centres, 6 district hospitals and 1 regional hospital.

¹ Information received from the Western Cape Department of Health including information from the Department's 2015/16 Annual Performance Plan and the Department's website.

Table 5 Eden District: Healthcare facilities, 2015

Municipality	Number of PHC clinics - fixed	Number of PHC clinics - non-fixed (mobile/satellite)	Community Health centres	Community Day centres	Total number of PHC facilities (fixed clinics, CHCs and CDCs, excluding non-fixed)	Number of district hospitals	Number of regional hospitals	Emergency medical services: Number of operational ambulances per 100 000 population
Eden District	38	35	0	7	80	6	1	0.50
Kannaland	4	5	0	0	9	1	0	1.17
Hessequa	4	5	0	0	9	1	0	0.92
Mossel Bay	3	11	0	1	15	1	0	0.32
George	10	6	0	3	19	1	1	0.45
Oudtshoorn	8	3	0	1	12	1	0	0.40
Bitou	4	2	0	1	7	0	0	0.39
Knysna	5	3	0	1	9	1	0	0.56

Source: Western Cape Department of Health, 2015

Of these facilities, 10 fixed clinics, 6 mobile/satellite clinics, 3 community day centres, 1 district hospital and 1 regional hospital is situated within George.

Due to rural distances between towns and health facilities being much greater than in the metropole, combined with the relatively lower population per square kilometre in rural areas, ambulance coverage is greater in rural areas in order to maintain adequate coverage for rural communities. Within the Eden District, George (0.45) has the 4th highest number of ambulances per 100 000 population.

Table 6 Western Cape: Healthcare personnel, 2015

Regional area	Number of medical officers*	Number of professional nurses*	Number of staff nurses*	Number of nursing assistants*
Western Cape	33.4	99.2	40.3	66.5
City of Cape Town	42.1	107.8	42.4	79.1
West Coast District	9.3	63.8	31.8	34.8
Cape Winelands District	22.3	84.8	41.4	49.2
Overberg District	11.5	70.6	24.7	31.9
Eden District	20.7	97.1	39.0	45.8
Central Karoo District	19.4	132.8	38.7	74.7

* Per 100 000 people

Source: Western Cape Department of Health, 2015

Healthcare personnel is also variedly spread across the districts; overall within the Western Cape, the Eden District had the 3rd highest number of the medical officers, professional nurses and staff nurses per 100 000 people the 4th highest number of the nursing assistants per 100 000 people.

3.2 HIV, AIDS and Tuberculosis treatment and care

Although treatment and care is essential in the management of HIV and AIDS, the need for and importance of preventative care cannot be over-emphasised, especially since to date, there is no known cure.

Table 7 Eden District: HIV, AIDS and Tuberculosis prevalence and care, 2015

Municipality	HIV - Antiretroviral treatment					Tuberculosis			
	ART patient load March 2013	ART patient load March 2014	ART patient load March 2015	Mother-to-child transmission rate	Number of ART clinics/ treatment sites 2015	Number of TB patients 2012/13	Number of TB patients 2013/14	Number of TB patients 2014/15	Number of TB clinics/ treatment sites 2015
Eden District	10 402	12 788	14 805	1.6%	64	4 825	4 909	4 935	83
Kannaland	100	273	260	0.0%	5	221	258	206	7
Hessequa	364	482	552	6.9%	5	343	333	291	9
Mossel Bay	2 117	2 490	2 966	0.6%	17	823	853	761	15
George	3 886	4 534	5 461	2.0%	18	1 730	1 742	1 807	24
Oudtshoorn	740	1 109	1 239	1.3%	6	774	893	911	12
Bitou	1 578	1 640	1 837	0.8%	7	443	344	395	6
Knysna	1 617	2 260	2 490	1.6%	6	491	486	564	10

Source: Western Cape Department of Health, 2015

At the end of March 2013, the Province highlighted that anti-retroviral treatment (ART) was provided to over 130 000 persons in the Province, 10 402 of whom were in the Eden District and 3 886 in the George municipal area. By the end of March 2015, George's patient load had increased to 5 461, with treatment being administered from 18 treatment sites.

In addition to improving the quality of life of the patient, anti-retroviral treatment to mothers both before and at birth, also decreases the chances that infants will contract HIV from their mothers. The most recent information for George indicates a mother-to-child transmission rate of 2.0 per cent, which is higher than the 1.6 per cent District rate, and exceeds the provincial medium term annual target of 1.4 per cent for 2015/16 and 2016/17.

Tuberculosis (TB) is a bacterial disease, and is a serious problem in South Africa, especially in the Western Cape. TB is highly infectious but curable. Approximately one out of ten people develop the disease and if not treated the infectious person can affect 20 other people or more in a year.

TB can only be cured if the full course of treatment, which can be from six to eight months, is completed. People who stop treatment are likely to develop multi-drug resistance, making the TB more difficult to cure and ultimately result in fatality. These cases are treated at TB specialist clinics.

The HIV epidemic has led to an enormous increase in the number of TB cases. People with HIV are far more susceptible to TB infection, and are less able to fight it off. TB is responsible for a third of all deaths in HIV-infected people.

The TB patient load in the Eden District stood at 4 935 in 2014/15, with treatment being administered from 83 clinics/treatment sites. Over the recent years, the patient load in the George municipal area has shown an increasing trend. The Municipality's patient load stood at 1 807 in 2014/15, with treatment being administered from 24 clinics/treatment sites.

3.3 Child health: Immunisation², malnutrition, neonatal mortality, low birth weight

Immunisation: Immunisation protects both adults and children against preventable infectious diseases. Low immunisation rates speak to the need for parents to understand the critical importance of immunisation, as well as the need to encourage parents to have their young children immunised. In 2015, the full immunisation coverage rate for the Eden District was 85 per cent (the highest among the district municipalities). George nevertheless had a coverage rate of 88 per cent, which was the 2nd highest in the District, and slightly below the Provincial average of 90 per cent.

Malnutrition: Malnutrition (either under- or over nutrition) refers to the condition whereby an individual does not receive adequate amounts or receives excessive amounts of nutrients. The number of malnourished children under five years in the Eden District in 2015 was 3.79 per 100 000, which was the 2nd highest incidence in the Province after the Central Karoo District. At 2.40, George's rate was below the District average, but on par with the provincial average of 2.43 per 100 000.

Table 8 Eden District: Child and maternal health, 2014/15

Municipality	Child health				Maternal health		
	Full immunisation coverage under 1 year	Severely malnutrition rate under 5 years	Neonatal mortality rate	Low birth weight	Maternal mortality ratio	Delivery rate to women under 18 years	Termination of pregnancy rate
Eden District	85%	3.79	7.2	16%	62.9	7.4%	7.4%
Kannaland	84%	3.51	14.2	23%	0.0	8.8%	0.0%
Hessequa	81%	0.99	5.6	17%	0.0	11.3%	0.1%
Mossel Bay	91%	4.69	9.5	13%	0.0	6.6%	9.5%
George	88%	2.40	8.7	19%	109.0	6.5%	12.6%
Oudtshoorn	84%	9.78	8.5	18%	56.7	9.6%	2.0%
Bitou	80%	0.46	0.0	0%	0.0	0.0%	0.0%
Knysna	78%	2.47	0.6	12%	58.3	6.4%	10.7%

Source: Western Cape Department of Health, 2015

Neonatal mortality rate: The first 28 days of life - the neonatal period - represent the most vulnerable time for a child's survival. The neonatal mortality rate is the number of neonates dying before reaching 28 days of age, per 1 000 live births in a given year. George's neonatal mortality rate of 8.7 is higher than the District and provincial averages of 7.2 and 6.2 per 1 000 live births respectively, and is also higher than the Province's 2019 target of 6.0 or less per 1 000 live births.

² The immunisation rate is calculated as the number of children immunised as a percentage of the total number of children less than one year of age. If children who are one year or older are immunised, the immunisation rate for that year could be greater than 100 per cent because more than 100 per cent of children aged less than one year would have been immunised in that particular year.

Low birth weight: Low birth weight is defined as weight at birth of less than 2 500 g. Low birth weight is associated with a range of both short and long term consequences. In the Eden District, 16 per cent of babies had a low birth weight; at 19 per cent, George had the 2nd highest incidence of babies with low birth weight in the District.

3.4 Maternal health: Maternal mortality, births to teenage mothers, termination of pregnancy

Maternal health refers to the health of women during pregnancy, childbirth and the postpartum period.

Maternal mortality³: Maternal death is death occurring during pregnancy, childbirth and the puerperium⁴ of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of pregnancy and irrespective of the cause of death (obstetric and non-obstetric).

George Municipality's most recent figures show a maternal mortality ratio of 109 per 100 000 live births (the highest in the District), with the District's ratio at 62.9. The maternal mortality ratio in George (and in the overall Eden District) exceed that of the Province overall which averaged 55.4 per 100 000 live births. The Province has a maternal mortality ratio target of 65 or less per 100 000 live births by 2019 which George Municipality is currently exceeding.

Births to teenage mothers: Teenage pregnancy is almost always unplanned; as a result when young parents are placed in a position to care for their children, life can become particularly tough, especially if they do not have family or social support.

In the 2014/15 financial year, the delivery rate to women under 18 years in the Eden District was 7.4 per cent. George's rate of 6.5 per cent was lower than the District average of 7.4 per cent but slightly exceeded the provincial average of 6.1 per cent.

Termination of pregnancy: Government hospitals, designated private doctors and gynaecologists, and non-profit providers offer safe and legal termination of pregnancy. To have a free abortion, the request must be made at a primary healthcare clinic, where the pregnancy will be confirmed, counselling provided, an appointment made, and a referral letter be given to a facility where the procedure can be performed.

George's termination of pregnancy rate⁵ of 12.6 per cent was above that of the District's 7.4 per cent.

³ Maternal deaths per 100 000 live births in health facilities.

⁴ *Puerperium* is defined as the time from the delivery of the placenta through the first few weeks after the delivery. This period is usually considered to be 6 weeks in duration.

⁵ Termination of pregnancy rate is calculated as the percentage of terminations as a proportion of the female population aged 15 to 44 years.

Teenage delivery and termination of pregnancy rates indicate a challenge with respect to unplanned and unwanted pregnancies.

3.5 Community based services

Community Based Services (CBS) in the Western Cape are provided by non-profit organisations (NPOs). Home CBS does not replace the family as the primary caregiver; it is meant to be a complementary and supportive service to the family to prevent 'burn-out' for family caregivers who care for sick relatives.

Table 9 Eden District: Community based services, 2015

Municipality	Community based services		
	Total number of non-profit organisation appointed home carers	Total number of visits	Average number of monthly visits per carer
Eden District	362	726 943	167
Kannaland	34	67 873	166
Hessequa	45	187 118	347
Mossel Bay	72	123 125	143
George	96	136 148	118
Oudtshoorn	57	113 860	166
Bitou	22	15 504	59
Knysna	36	83 315	193

Source: Western Cape Department of Health, 2015

The total number of NPOs appointed carers in Eden during 2014/15 was 362. On average, each carer carried out an average of 167 monthly visits. Within the George Municipality, the average number of monthly visits for the 96 carers was 118, which is lower than the District average.

4. Poverty

In an effort to eliminate poverty and reduce inequality, the National Development Plan has set the objective of having zero households earn less than R418 per month by 2030.

As per Table 10, George Municipality was lower than this target in 2011 with approximately 14.8 per cent of its 53 591 households earning less than R400 a month. Indigent dependency on municipal support increases with lower levels of household income. Municipal resources are therefore strained in an effort to provide free basic services.

Table 10 Eden District: Household income, 2011

Municipality	None income	R1 - R4 800	R4 801 - R9 600	R9 601 - R19 600	R19 601 - R38 200	R38 201 - R76 400	R76 401 - R153 800	R153 801 - R307 600	R307 601 - R614 400	R614 001 - R1 228 800	R1 228 801 - R2 457 600	R2 457 601 or more
Eden District	13.2	2.8	4.3	14.3	20.0	17.1	12.1	9.1	5.0	1.4	0.4	0.3
Kannaland	8.0	2.4	4.7	20.1	28.1	18.6	9.3	5.8	2.1	0.5	0.2	0.2

Bitou	18.1	4.4	5.5	16.4	19.7	13.8	9.0	6.7	4.0	1.6	0.5	0.4
Knysna	16.4	3.3	4.3	13.9	18.8	15.0	11.1	8.8	5.6	1.9	0.6	0.5

Source: Statistics South Africa, Census 2011

Measuring levels of poverty and inequality for the period 2006 to 2011, Statistics South Africa's 2014 Poverty Trends Report specifies that the lower-bound poverty line (LBPL) for March 2011 was set at R443 (per capita, inflation adjusted poverty line) meaning that any individual earning less than R443 a month would have to sacrifice essential food items in order to obtain non-food goods. Compared to the above specified average household income for George Municipality, it is concerning to note that approximately 7 931 households in the municipal area earn less than R400 a month and must therefore survive on less than what an individual persons requires as per the LBPL measure.

Table 11 Eden District: Per capita income, 2011 - 2013

Regional area	Per capita income (R)		
	2011	2012	2013
Western Cape	43 614	44 291	44 553
Eden District	33 171	34 203	34 655
Kannaland	27 346	28 117	28 703
Hessequa	19 710	19 748	19 749
Mossel Bay	56 682	60 176	61 186
George	30 290	30 706	30 889
Oudtshoorn	23 060	23 589	23 940
Bitou	31 005	31 891	32 411
Knysna	34 314	35 095	35 593

Source: Own calculations, Department of Social Development, 2015 and Quantec, 2015

As per Table 11, per capita income in George was the 4th highest in the District in between 2011 and 2013, despite the Municipality having the largest population and the largest economy in the District.

Per capita income in George increased from R30 706 in 2012 to R30 889 in 2013, which is a 0.6 per cent increase. The Municipality needs to make significant progress if it is to achieve the 2030 NDP target of R110 000 per person, per annum.

5. Safety and security

The Constitution upholds the notion that everybody has the right to freedom and security of the person. The safety of persons and property is therefore vitally important to the physical and emotional well-being of people and business. Without the respect of person and property, it would be impossible for people to live peacefully, without fear of attack and for businesses to flourish.

The extent of crime in South Africa does however not only have a significant impact on the livelihood of citizens, but also affects the general economy. Crime hampers growth and discourages investment and capital accumulation. If not addressed with seriousness, it has the potential to derail both social and economic prosperity.

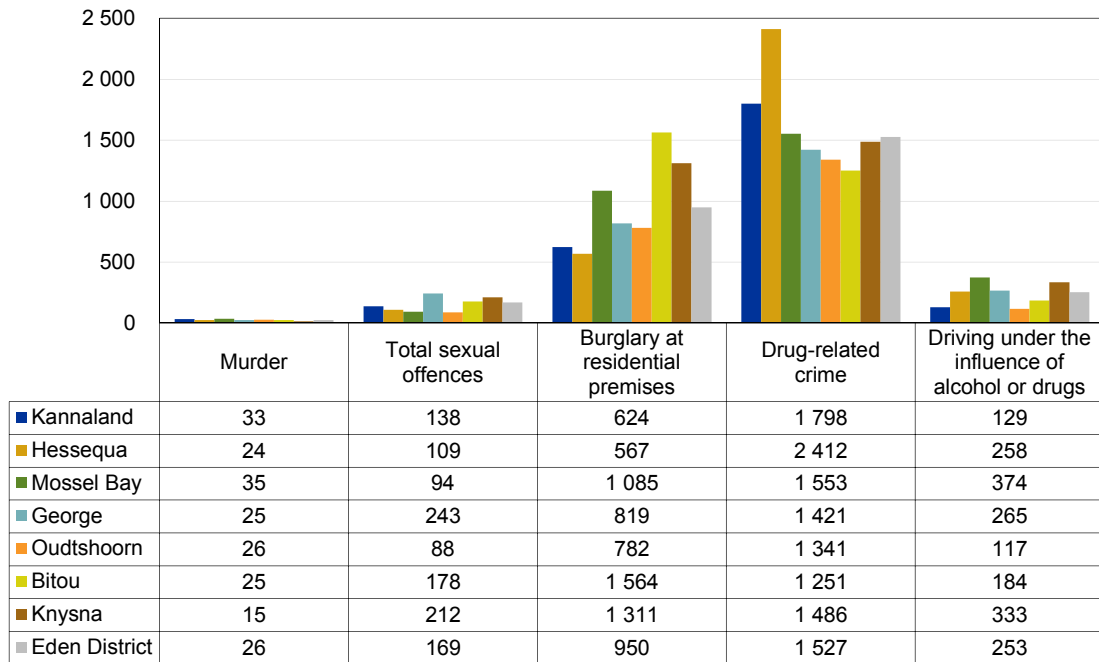

People's general impressions, as well as official statistics on safety and crime issues, mould perceptions of areas as living spaces or place in which to establish businesses. The discussion in this section that follows is limited to the reported contact and property-related crime such as murder and sexual crimes, as well as crime heavily dependent on police action for detecting drug-related crimes and driving under the influence of alcohol/drugs.

Figure 4 George: Crime statistics, 2005/06 - 2014/15

Source: Quantec Research, 2015

Drug-related crime is the most dominant category within George Municipality, reflecting a steady increase since 2005/06 up to 2014/15. The incidence of burglaries at residential premises is the second most prevalent, it dropped to 1 673 cases in 2014/15 after four consecutive periods of increases since 2010/11. Although, there is no significant change in the number of reported sexual offences the number of reported cases is still unacceptable, hovering above 440 cases since 2010/11. A downward trend can be observed in reported cases of murder and most notably driving under the influence of alcohol or drugs.

Figure 5 Eden District: Crime statistics per 100 000, 2014/15

Source: Quantec Research, 2015

It is customary to express occurrences of crime per 100 000 as to allow for an easy comparison between areas with different population densities.

It is evident from above table that drug-related crimes - possession, manufacturing, distribution of illegal substances (including alcohol related transgressions) - is a major concern throughout the Eden District with an average of 1 527 crimes per 100 000. Drug-related crimes has a severe negative impact on human development by degrading the quality of life as it infiltrates all aspects of society including families, health, the work environment and the economy. At 1 421 cases per 100 000 people, the incidence of drug-related in George is nevertheless below the District average.

Given its regular occurrence and the psychological impact on victims, residential burglaries are an obstinate concern in South Africa. The Eden District is no exception, with residential burglaries being the second most prominent criminal offence among all local municipalities at an average of 950 occurrences per 100 000 population. George have a lower incidence of residential burglaries than the District with 819 cases per 100 000 persons, compared to 950 cases per 100 000 persons for the District.

6. Basic services

Access to basic services within South Africa is a basic human right. It is also an indication of the quality of life of the inhabitants in the country. Access to basic services has a wider impact on education and health and therefore also on the economy. The 2015 Municipal Economic Review and Outlook further highlight the positive economic impact of basic infrastructure spending on the overall economy.

The levels of access to basic services will be discussed below in terms of access to water, sanitation, energy, refuse removal and housing. The 2015 Socio-economic Profile also contains a breakdown of access to basic services for each ward within George Municipality, hereto attached as an Annexure. This information provides the Municipality with an overview of ground-level access to basic services that will assist in the allocation of resources towards the areas of most need. This data will also inform the Municipality's IDP and service delivery budget and implementation plan (SDBIP), the latter which, as per MFMA Circular 13, must contain a ward-specific capital works plan.

6.1 Access to water

Table 12 indicates the levels of access to potable water within the Eden District in 2014.

Table 12 Eden District: Access to water, 2014

Regional area	Piped water inside dwelling	Piped water inside yard	Piped water less than 200 m from dwelling	Piped water more than 200 m from dwelling	Borehole/ rain-water tank/well	Dam/river stream/spring	Water-carrier tanker/water vendor	Other/ Unspecified
Western Cape	74.1	13.8	8.7	2.5	0.1	0.1	0.1	0.6
Eden District	71.5	16.8	6.9	2.6	0.7	0.5	0.3	0.7
Kannaland	76.2	15.1	3.0	1.3	0.8	1.8	0.9	1.1
Hessequa	80.4	14.4	3.0	0.3	0.5	0.6	0.3	0.5
Mossel Bay	77.0	15.1	3.4	2.8	0.4	0.3	0.3	0.7
George	70.1	20.1	5.6	1.6	1.2	0.4	0.4	0.7
Oudtshoorn	74.4	14.4	5.6	2.6	0.3	1.2	0.4	1.2
Bitou	58.2	21.8	11.5	6.8	1.1	0.2	0.1	0.2
Knysna	66.5	12.0	15.9	3.9	0.4	0.0	0.1	1.0

Source: Quantec Research, 2015

The data indicates that in George, 70.1 per cent of households have access to water within their dwellings and a further 20.1 per cent have access within their yard. The minimum service level is households that have access to water 200 m or less from their dwelling. Approximately 95.8 per cent of households meet this minimum standard. This puts George close to the NDP target of 100 per cent access to water by 2030. George Municipality is almost on par when compared to the Provincial and District average of 96.6 and 95.2 per cent respectively. Although access to piped water inside the dwelling in George is almost on par with the Provincial and District averages, there is room for improvement.

The Blue Drop Certification reflects on the actual quality of tap water within a municipality. It further acknowledges a municipality's ability to sustain this quality and provides an indication of preparedness to deal with any incident that may pose a water related health risk to the public.

The certification process attributes a weighted score according to a municipality's performance measured against a specific set of water management criteria such as water safety planning, drinking water quality process management and control, drinking water quality compliance etc. Municipalities that achieve overall scores above 95 per cent are officially awarded the prestigious Blue Drop Status.

George achieved a 98.12 percentage score for 2011. This performance is encouraging given the numerous challenges the Municipality has faced (with particular regard to water scarcity).

6.2 Access to refuse removal

Inadequate waste services lead to unpleasant living conditions and a contaminated, unhealthy environment. For this reason municipalities across the country provide their inhabitants with waste removal services.

Table 13 displays the levels of access to refuse removal within the Eden District in 2014.

Table 13 Eden District: Access to refuse removal, 2014

Regional area	Removed at least once a week	Removed less often	Communal refuse dump	Own refuse dump	No rubbish disposal	Unspecified/other
Western Cape	89.8	1.2	2.8	4.6	1.0	0.6
Eden District	86.3	0.7	1.7	7.4	2.4	1.4
Kannaland	66.3	1.3	1.6	22.9	5.0	3.0
Hessequa	78.7	0.5	1.1	15.9	1.7	2.1
Mossel Bay	92.6	0.5	0.7	3.1	2.4	0.6
George	87.8	0.6	1.1	6.0	2.7	1.7
Oudtshoorn	78.2	1.4	2.8	13	3.2	1.4
Bitou	86.7	0.8	5.4	4.7	1.2	1.2
Knysna	93.1	0.7	1.5	2.6	1.4	0.8

Source: Quantec Research, 2015

The data indicates that within George Municipality, 87.8 per cent of households have their refuse removed at least once a week. This is slightly higher than the District and lower than the provincial access levels.

Challenges in terms of waste management can include limited land availability for waste management facilities.

6.3 Access to electricity

Table 14 reflects the different sources of energy used for lighting by households in the Eden District.

Table 14 Eden District: Access to electricity, 2014

Municipality	Electricity	Gas	Paraffin	Candles	Solar/other/ unspecified
Eden District	90.7	0.2	2.9	5.6	0.6
Kannaland	89.7	0.3	0.0	8.7	1.3
Hessequa	94.8	0.3	0.2	4.0	0.7
Mossel Bay	93.5	0.4	2.1	3.4	0.6
George	90.5	0.2	4.3	4.4	0.7
Oudtshoorn	85.2	0.1	0.9	13.4	0.4
Bitou	93.5	0.1	1.6	4.2	0.5
Knysna	88.4	0.3	6.3	4.6	0.3

Source: Quantec Research, 2015

It is evident that the biggest source of energy in George was electricity (90.5 per cent). This is almost on par with the Eden District average of 90.7 per cent during this period.

6.4 Access to sanitation

Access to sanitation is one of the most important basic services as it concerns the health and dignity of human beings. Table 15 shows the type of sanitation facilities available to households in the Eden District in 2014.

Table 15 Eden District: Access to sanitation, 2014

Municipality	Flush or chemical toilet	Pit latrine	Bucket latrine	Not listed elsewhere
Eden District	84.5	6.4	2.0	7.1
Kannaland	73.6	16.1	1.8	8.6
Hessequa	90.2	5.2	0.9	3.7
Mossel Bay	90.5	2.0	1.6	5.8
George	87.4	3.6	2.1	6.9
Oudtshoorn	80.5	9.3	3.5	6.7
Bitou	81.8	13.6	0.9	3.7
Knysna	75.4	8.9	2.2	13.5

Source: Quantec Research, 2015

In 2014, 87.4 per cent of households in George had access to flush toilets (connected to sewerage/septic tank), which is slightly higher than the District average of 84.5. The proportion of households that did not have access to sanitation in 2014 was 6.9 per cent, whilst 5.7 per cent of households made use of bucket latrines and pit latrines.

6.5 Housing

Decent housing with the relevant basic services is essential for human security, dignity and well-being.

Table 16 Eden District: Types of housing structures, 2014

Municipality	House or brick structure on a separate stand or yard	Traditional dwelling	Flat in a block of flats	Town/cluster/semi-detached house (simplex, duplex or triplex)	House/flat/room in backyard	Informal dwelling/shack in backyard	Informal dwelling/shack NOT in backyard, e.g. in an informal/squatter settlement	Room/flatlet not in backyard but on a shared property	Other
Eden District	75.0	0.7	2.3	3.5	1.5	5.9	9.3	0.7	1.2
Kannaland	94.9	0.4	0.6	0.5	0.4	1.1	1.3	0.1	0.7
Hessequa	89.8	0.8	1.6	0.7	1.0	2.6	2.3	0.4	0.8
Mossel Bay	72.9	0.6	2.7	6.8	1.2	5.3	7.8	1.3	1.2
George	75.2	0.6	2.6	2.6	2.0	7.3	8.0	0.7	1.1
Oudtshoorn	78.1	0.7	2.0	6.0	1.7	4.6	5.5	0.5	0.9
Bitou	66.3	1.1	1.5	1.2	0.8	8.8	17.3	0.6	2.5
Knysna	64.4	0.6	2.7	3.6	1.5	6.1	19.1	0.5	1.4

Source: Quantec Research, 2015

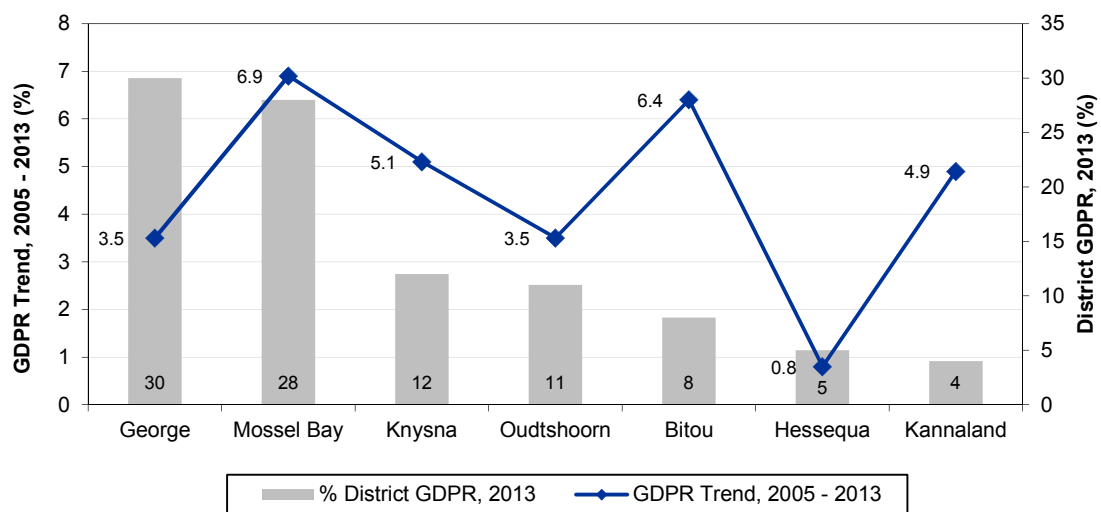

Table 16 highlights the various dwellings per type in George Municipality in 2014. A relatively high proportion (75.2 per cent) of the Municipality's households reside in a house or brick structure on a separate stand, while 8 per cent reside in informal dwellings in an informal/squatter camp and 7.3 per cent reside in an informal dwelling/shack in the backyard.

7. Economy

Economic growth in South Africa has been deteriorating since 2012. GDP growth of 2.5 per cent, 2.2 per cent and 1.5 per cent was achieved in 2012, 2013 and 2014 respectively.⁶ Initiatives to bolster economic growth on a national scale have been undertaken and progress has been made - talks to establish a more sustainable labour relations environment have been undertaken, and administrative reforms to reduce red tape have been implemented. Key structural issues which hinder the desired growth levels nevertheless remain entrenched. Given the close linkages between the municipalities in the Province and the national economy, the metro and district (and thus local) municipalities in the Western Cape are impacted by current state and fluctuations in the national economy.

The Eden District grew by 4.6 per cent on average year-on-year from 2005 - 2013. The District managed to grow by 3.0 per cent per annum during the recessionary period (2008 - 2009); while managing a higher growth rate of 3.8 per cent per annum during the recovery period (2010 - 2013). The District has hitherto failed to reach its 2005 - 2013 trend growth rate.

⁶ IMF World Economic Outlook July 2015

Figure 6 Eden District municipalities: GDPR growth, 2005 - 2013

Source: *Municipal Economic Review and Outlook (MERO), 2015*

As per Figure 6, George comprised 30 per cent of the District's GDPR (or R10.3 billion of the District's GVA of R33.4 billion) in 2013, making it the largest economy in the District. The Municipality experienced average year-on-year growth of 3.5 per cent from 2005 - 2013, which is slightly less than the Province's growth rate of 3.6 over this period. George Municipality has been growing slower compared to similar municipalities in the Province, despite its size.

Table 17 Eden District: GDPR growth, 2000 - 2013

Municipality	Real GDP growth (average yoy %)		
	Expansion 2000 - 2007	Recession 2008 - 2009	Recovery 2010 - 2013
Eden District	6.1	3.0	3.8
Kannaland	6.2	5.3	2.9
Hessequa	1.7	-1.6	1.8
Mossel Bay	9.0	4.7	5.9
George	5.1	1.7	2.7
Oudtshoorn	4.3	2.4	2.4
Bitou	9.6	4.8	5.3
Knysna	6.9	3.9	3.8

Source: *Municipal Economic Review and Outlook (MERO), 2015*

As per Table 17, economic growth tapered down to 1.7 per cent annually during the recessionary period 2008 - 2009. Growth rose to 2.7 per cent over the recovery period (2010 - 2013), and remains significantly below the 2005 - 2013 trend growth rate of 5.1 per cent per annum.

This growth is underscored by significant variation in industry-specific growth rates. Growth in a particular industry depends on a number of factors (economies of scale, technological developments and demand trends among others) which often diverge among industries.

Table 18 displays the industry-specific growth rates for each municipality in Eden District.

Table 18 Eden District: Sectoral growth, 2005 - 2013

Industry	Kannaland	Hessequa	Mossel Bay	George	Oudtshoorn	Bitou	Knysna	Eden District
Agriculture, forestry and fishing	1.3	-1.5	4.8	1.0	1.0	5.5	7.7	1.6
Manufacturing	4.1	1.7	5.5	1.5	2.0	5.3	3.0	3.6
Construction	13.3	2.0	10.9	8.3	8.8	8.8	8.1	8.7
Commercial services	7.2	0.6	6.7	3.8	3.8	6.9	4.9	4.9
General government and Community, social and personal services	5.0	3.3	9.2	4.2	3.8	3.5	5.1	5.2
Other	-0.6	-4.0	4.2	-4.0	-0.6	1.5	5.4	-0.4
Total	4.9	0.8	6.9	3.5	3.5	6.4	5.1	4.6

Source: Municipal Economic Review and Outlook (MERO), 2015

George recorded high growth rates (8.3 per cent) in its construction sector during the review period. The Municipality's agriculture sector experienced a meagre growth rate of 1.0 per cent per annum whilst "other" sectors contracted by 4.0 per cent annually.

Figure 7 George: Sectoral composition, 2013

Source: Municipal Economic Review and Outlook (MERO), 2015

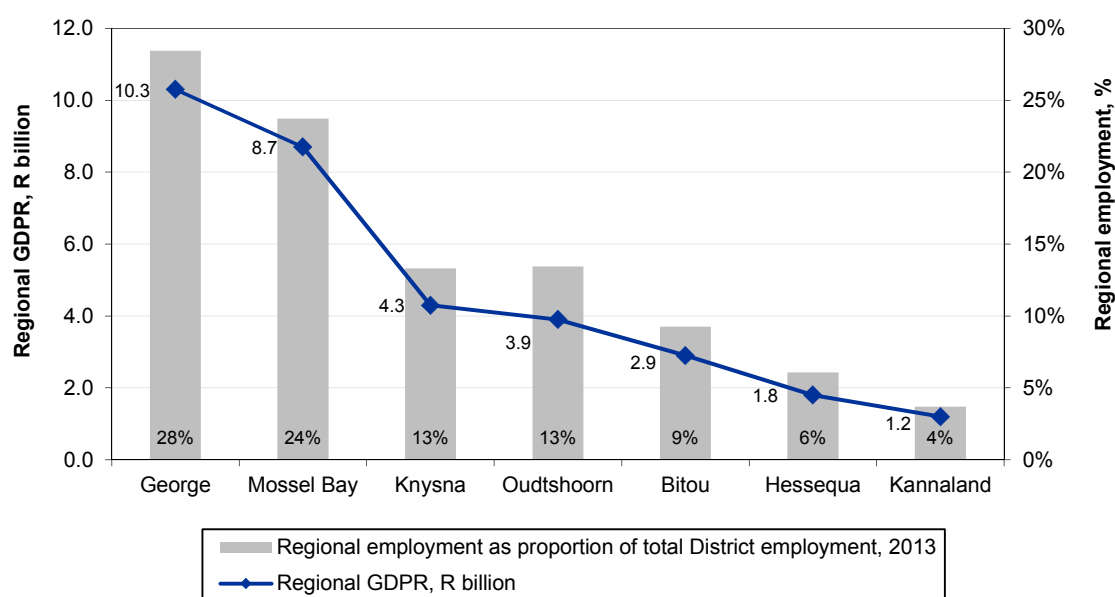

As seen in Figure 7, George's fastest growing sectors (construction, general government and community services) made up 28 per cent of the total GDP in the region in 2013. The finance, insurance, real estate and business services sector (as a part of the commercial services sector) made the largest contribution to GDP in 2013 (25 per cent), followed closely by the wholesale and retail trade, catering and

accommodation sector which contributed 16 per cent of the Municipality's 2013 GDP. The manufacturing sector, which recorded a low growth rate of 1.5 per cent during the review period comprised 13 per cent of the Municipality's total GDP in 2013.

8. Labour market

Unemployment remains one of South Africa's biggest challenges. Overall unemployment (as per the narrow definition) stood at 25 per cent as at the end of 2014.⁷ Skills shortages, weak economic growth and electricity supply constraints are among the most significant constraints on employment growth. The NDP aims to reduce unemployment to 6 per cent by 2030. Improvements in education and training are integral to the attainment of this goal. These issues are structural and are felt at a local government level, where high levels of unemployment put significant strain on municipal funds.

Figure 8 Eden District municipalities: Municipal GDP vs municipal employment, 2013

Source: *Municipal Economic Review and Outlook (MERO), 2015*

George comprised 30 per cent of the GDP and 28 per cent of the employment in the District in 2013. Figure 8 shows that George is thus the largest employer in the Eden region. Viewed in conjunction with the Municipality's relatively large GDP, the relationship between economic well-being of the region and employment in the Municipality is brought to the fore.

⁷ Statistics South Africa, 2015

Figure 9 Eden District: Municipal GDPR vs municipal employment, 2005 - 2013

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Figure 9 provides a comparison of the annual municipal GDPR growth rate and annual employment growth rate in the District. Whilst all the municipalities in the District displayed a positive annual GDPR growth rate from 2005 - 2013, Hessequa and Kannaland were the only municipalities who experienced negative annual employment rate over the period. George experienced the 5th fastest GDPR growth (3.5 per cent per annum) in the District but zero employment growth over the period under review.

Figure 10 George: Employment by sector, 2013

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Figure 10 illustrates that in 2013 most people in George were employed in the commercial services sector (44 per cent), followed by the general government and community, social and personal (CSP) services sector (30 per cent). The manufacturing and construction sectors each employed 10 per cent of the workforce in George while agriculture employed 5 per cent.

Table 19 Eden District: GDPR growth vs net employment, 2005 - 2013

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Table 19 shows that during the review period 2005 - 2013 the general government and CSP services sector created the highest number of jobs (net 2 924), followed by commercial services (net 1 455). Table 19 also shows that although construction grew robustly at 8.3 per cent, this growth did not translate into jobs as a net of 585 jobs were lost during the review period. Agriculture shed the most jobs (net 2 342) followed by manufacturing (net 1 526).

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Table 20 shows that George Municipality experienced an increase in labour demand in the highly skilled and informal sector category during the review period. The demand for highly skilled labour grew by 1.0 per cent per annum, while demand for informal labour grew by 4.8 per cent per annum. The demand for semi-skilled labour dropped by 2.8 per cent, while the demand for skilled labour dropped by 0.6 per cent.

9. Environment

The 2011 National Strategy for Sustainable Development for South Africa describes the concept of sustainability as composing of three overlapping developmental spheres namely, the natural environment, social context and economic activity. These spheres, which are underpinned by a system of governance, are interlinked and fully dependent on the extent and functionality of the others. A trade-off in one sphere will compromise the functionality of another with significant knock-on effects.

The natural environment, inclusive of elements such as land, inland water, biodiversity and oceans and coastlines are increasingly under pressure as a result of certain socio-economic factors such as population growth rates and increased land use. These pressures on natural resources also pose limitations to economic growth. Climate change also poses significant bio-physical and economic risks and as such, sustainable and effective resource-use and climate change response, should be both a Provincial as well as Municipal strategic priority.

The Environmental section outlines key focus areas relevant to the current state of the natural environment and the associated need for environmental management, specifically, within the sphere of local government. These broad focus areas – legislative reform, integrated waste management, climate change – are briefly discussed in the following section and where available, include a municipal specific overview.

This information is intended to strengthen municipal planning support, inform future budget allocations and promote resource efficiency and effectiveness to ultimately preserve the natural environment for future generations.

9.1 Law reform - Implementation of SPLUMA/LUPA in municipalities

It is paramount that municipalities have planning and decision-making mechanisms in place to support its service delivery obligations and growth objectives. The Spatial Planning and Land Use Management Act, Act No. 16 of 2013 (SPLUMA), implemented on 1 July 2015, and the Western Cape Land Use Planning Act 2014 (LUPA) ushers in a new era of planning and development decision-making where the responsibility rests largely on local municipalities to fulfil their role as land use planning decision-makers as per Constitutional mandates and obligations. Section 24(1) of SPLUMA determines that a municipality must, after consultation as prescribed in the Act, adopt and approve a single land use scheme for its entire area within five years from the commencement of this Act.

This land use scheme serves as a tool for municipalities to guide and manage development according to their vision in terms of its Integrated Development Plan (IDP) and Spatial Development Framework (SDF). This will provide potential developers and land users with a clear indication of developable land and its associated land uses within the municipal space. Clarity in land use zones can avoid any future confusion and lengthy delays in terms of prospective developments/uses.

Currently many municipalities have a Land Use Management Scheme in place in the form of Zoning Schemes, which are compliant with the provisions of the Land Use Planning Ordinance, 1985 (Ordinance 15 of 1985) (LUPO). These are known as LUPO section 7 and 8 Schemes. The process has commenced to replace these schemes to meet the requirements for Integrated Zoning Schemes (Land Use Schemes) in terms of section 24 of SPLUMA.

Transitional arrangements following the planning law reform should be noted. The Department of Rural Development and Land Reform (DRD&LR) and SALGA Circular 1 of 2015 noted that a municipality can continue to operate within old order legislative parameters in so far as that legislation does not conflict with SPLUMA. The Circular proposed that the decision-making structures associated with SPLUMA must be applied.

The Western Cape Department of Environmental Affairs and Development Planning sought a legal opinion in this regard and subsequently adopted a different approach. After consultation, the Provincial Minister of Local Government, Environmental Affairs and Development Planning has decided against a blanket implementation of LUPA in the Western Cape. Instead, a staggered implementation approach will be adopted. LUPA will be implemented, and LUPO will be repealed, in a staggered manner as and when municipalities are ready.

During the transition period, Western Cape municipalities were advised not to adopt the 'hybrid' solution proposed by DRD&LR and SALGA (Circular 1 of 2015). Instead, municipalities were advised to utilise the old-order legislation in its entirety (including decision-making structures) until the Western Cape Land Use Planning Act, Act No. 3 of 2014 (LUPA) and the LUPA Municipal Planning By-law is adopted. This was communicated in WCG: DEADP Departmental Circular 0009/2015.

In order to determine a municipality's readiness, the Department developed a set of actions that each Municipality must complete before the Minister will consider recommending that the Premier repeal LUPO and implement LUPA in a particular municipality.

These actions, as communicated in WCG: DEADP Departmental Circular 0006/2015, are as follows:

- a) Municipalities must have adopted and gazetted their By-law on Municipal Land Use Planning.
- b) Municipalities must be at an advanced stage of establishing their Municipal Planning Tribunal. An advanced stage is regarded as having completed Step 7 of the 'Municipal Planning Tribunal Establishment Manual'.
- c) Municipalities must have Council adopted delegations. This includes appointing the Authorised Official(s) and adopting their categorisation of land use applications.
- d) Municipalities must have Council adopted tariff structures in place for receiving land use management applications in terms of the new legislation.

On completion of these actions, the Municipal Manager must submit a letter to the Department noting the completion thereof in addition to providing the Department with the necessary supporting documentation/proof. The Department will then initiate the process of getting the Premier to implement LUPA in that particular municipality. Municipalities should note that this process may take 4 - 6 weeks to complete.

The Premier issued a proclamation to bring the LUPA into effect on 1 September 2015 in George Municipality. The proclamation was published in the Provincial Gazette 7 481 on Tuesday, 1 September 2015. As such, from 1 September 2015 all land use applications submitted to George Municipality must be submitted in terms of their Municipal By-law on Land Use Planning.

George Municipality currently has a Land Use Management Scheme in the form of Zoning Schemes compliant with the provisions of the Land Use Planning Ordinance No. 15 of 1985 (LUPO).

George Municipality drafted an integrated zoning scheme in 2012, this however, before the Proposed Standard Draft Zoning Scheme was drafted. George Municipality has since decided to use the Proposed Standard Draft Zoning Scheme being prepared by WCG: EADP, once it is finalised. This Standard Draft Zoning Scheme is in an advanced stage of preparation.

9.2 From waste management to integrated waste management

There is a shortage of available landfill airspace across the Province. The recovery of waste material for the waste economy is only at 9 per cent. There is a big need to move away from the landfill bias to integrated waste management. To achieve this, more integrated waste management infrastructure is urgently needed. This will increase the recovery of waste material and thereby save landfill airspace, promote the waste economy, reduce the environmental impacts of waste management and create jobs. A mind shift also is needed from municipalities to move away from seeing waste just as a nuisance and risk to realise the intrinsic value of waste and to utilise the potential value of it.

Due to the landfill airspace shortage, municipalities are exploring regional waste disposal options. Such options are however costly due to the high transport cost. The effective management of such regional facilities is also problematic due to the multi-party involvement. These regional facilities have to be operated by the district municipalities and unfortunately these municipalities do not receive any MIG Funding, which makes these facilities difficult to construct and operate. However, regionalisation of not just waste disposal facilities, but integrated waste management facilities have to be encouraged and alternative business cases such as private public ventures have to be explored.

All the waste disposal facilities except one (application to obtain a waste management licence is currently in process) have waste management licences. Since 2013 the requirements for landfill operation has increased dramatically, therefore making it difficult and very expensive for municipalities to comply with. The

compliance of landfills in the Province has to increase dramatically which means that more resources are needed to meet the new legislative requirements. The majority of the landfills in the Province have by now reached full capacity must be closed and rehabilitated. Due to the strict environmental requirements set by the national government for closure and rehabilitation of waste disposal facilities, it is very expensive to comply and municipalities find them in the difficult position that it does not have the necessary resources to rehabilitate these facilities.

Cost reflective waste tariffs are in general not charged by municipalities and combined with the high level of poverty with people who cannot afford high service charges, impacts negatively on the sustainability of the waste management service. Waste management should also be regarded as bulk infrastructure. If not, it further puts this service at a funding disadvantage. This is a perception that must be changed urgently so that waste management can also benefit equally from government funding for development and building of houses.

In general, the skill levels of municipal waste managers should be improved as well as the staff capacity available to render an effective and efficient waste management service. A further priority area for municipalities is to either align its waste management by-laws with national legislation or to publish a waste management by-law which will assist in the management of this service and facilitate interaction with the private sector to improve service delivery and to benefit from the waste economy and job creation.

9.3 Climate change

The science of human-caused climate change is undisputable⁸. The average global temperature has already increased by 0.8°C; at this rate we are on track to reach a 4°C global average warming by 2100. Evidence suggests Africa is warming faster than the global average which is having severe impacts for hard-won developmental gains across an already vulnerable continent. Climate change impacts are already evident in the Western Cape and are negatively impacting and undermining economic and social development. Infrastructure, basic resources (water, food and energy) and livelihoods will all be impacted on and these impacts will affect all sectors and stakeholders, with a particular impact on the poor and vulnerable sectors of our community. Substantial responses are required by all role-players in order to adapt to the changes that will be experienced.

To date, the implementation of climate change responses to this changed climate has been slow. Many stakeholders do not perceive that it is their responsibility or mandate to prepare for climate change, and state limited resources and the delivery of other basic services as a challenge. Climate change is everyone's business and has to be incorporated into every facet of spatial and land use planning, service

⁸ The Intergovernmental Panel on Climate Change released its 5th global assessment report in 2013, and states "warming of the climate system is unequivocal, and since the 1950s, many of the observed changes are unprecedented over dates to millennia. The atmosphere and ocean have warmed, the amounts of snow and ice have diminished, sea level has risen, and the concentrations of greenhouse gasses have increased".

delivery, infrastructure development and economic planning. Failure would compromise basic service delivery, exacerbate poverty and undermine the most vulnerable communities.

The following are some recent observed trends in the Western Cape:

Climate Variable	Observed trends	Outlook and Comments
Temperature	<p>General trend of rising temperatures, including both minimum and maximum temperatures.</p> <p>Increased temperatures and increased evapotranspiration result in dry soils and vegetation which becomes more readily fire-prone.</p> <p>Tuesday March 3rd 2015 was the highest temperature ever recorded (in 100 years) in Cape Town at 42°C. This coincided with severe fires.</p>	<p>For example there has been a decrease in the number of very cold days to create the cold (or chill) units required for deciduous fruit cultivars to grow.</p> <p>Number and intensity of fires seem to be on the increase. Disaster funds for fires will need to increase, but more importantly proactive protection of ecosystems and water is the required long term response.</p>
Precipitation (Rain, snow)	<p>Reduction in rain days in autumn and summer especially on the Southern Coast.</p> <p>Evidence of a trend in increasing severity of rainfall events (i.e. more rain falls in a shorter time).</p> <p>Winter rainfall season starting later each year.</p> <p>Anecdotal information of reduction of winter snow in Karoo – may result in decreased groundwater recharge. Current status unknown.</p>	<p>City of Cape Town responding with increase flood preparedness plans in winter, and increasing standard requirements for storm water flows in infrastructure.</p> <p>Late onset of rainfall in winter of 2015 was very close to causing a major problem for wheat farmers (documented in SmartAgri Status Quo Assessment – DOA and DEADP).</p>
Wind	<p>Wind velocity expected to increase, with stronger South Easterly. Impacts currently unknown.</p>	<p>Impacts on tourism: e.g. Table Mountain cable car operations, Robben Island ferry operations, beach usability etc.</p>
Sea level rise	<p>Sea level has been rising at the same rate as global trends. See discussion on 'sea storm surges' below.</p>	<p>There is global concern that previous estimates of the rates of sea level rise may have been too optimistic, and that decision makers need to be aware that worst case scenarios in this century may be possible.</p>

Climate Variable	Observed trends	Outlook and Comments
Ocean temperature	The Agulhas current has warmed by 1.5°C since 1980. Changes in the distributional range of fish and other marine species. Climate change is also responsible for shifts in the distribution of the West Coast rock lobster. However the full understanding of these changes is complex and cannot necessarily all be attributed to a changing climate. ⁹	Impacts of shifting marine resources have implications for social and economic fabric of coastal communities.
Ocean Acidification ¹⁰	Ocean acidification would have severe impacts on most ocean life. Currently the ocean has already acidified by 0.1 pH points as a global average (this varies from region to region).	Current impacts not evidently well described.

Between 2003 and 2008, direct damage (predominantly from floods and drought in the Eden and Central Karoo Districts), caused approximately R3 billion of damage in the Western Cape. If not closely monitored and managed, above variables could potentially cause other severe natural disasters which will be detrimental to human life. These include:

Climate Variable	Observed trends	Outlook and Comments
Floods/Droughts	<p>Numerous flood and drought events have occurred in the Western Cape in the past decades with frequency seeming to increase. Difficult to determine if these are all attributable to a changing climate, but likely, given similar trends globally.</p> <p>There is currently a drought in the north of South Africa which is impacting sugar and maize commodities. The Central Karoo might be entering a drought scenario (although some climate responses such as the water reuse plant in Beaufort West might be reducing these impacts currently).</p>	ALERT: As at 20 September 2015, the WC had 72 per cent dam capacity. At the end of the wet season in 2014, dam capacity stood at 92 per cent.

⁹ SAEON. 2011 Observations in Environmental Change in South Africa.

¹⁰ As the ocean absorbs CO₂ its pH changes.

Climate Variable	Observed trends	Outlook and Comments
Sea Storm Surges (big storm events)	In the past 15 years various big storm events have caused infrastructure damage along the Western Cape coastline. Studies reflect sea level has risen on the Western Cape coastline in accordance with global trends. Most impacts are due to inappropriate coastal development.	Coastal municipalities potentially having a big role to play here. Insurance companies are starting to withdraw from some vulnerable coastal areas.
Fire	Observed increased fire incidences ¹¹ and potential increase in extent and severity of fires. 2015 fires occurred in record breaking heat temperatures: Economic implications to the Tourism industry unknown; costs to CapeNature and SANParks not yet documented.	Challenging to differentiate how much of increase in fires and intensity is climate change related but global trends indicate climate change has a role to play. GLOBAL ALERTS: Fires in the USA and Canada in 2015 are unprecedented in scale and costs; also on the back of a prolonged drought.
Hail	There is anecdotal evidence that more hail storms are occurring in never before areas of the Western Cape, causing economic losses to agriculture (SmartAgri Status Quo Report).	Increase likelihood of hail storms is not well understood.

There is thus a unique opportunity in the immediate short term to radically shift our planning and infrastructure development to become climate resilient, and to reduce our greenhouse gas emissions that are directly driving the problem. The window of opportunity is however short and closing rapidly, implying that climate change response is urgent if the Western Cape aims to continue with a thriving local economy and to reducing inequality and poverty.

Current disaster funding approaches are not sufficient for responding to climate change. These funds are generally reactive. Disaster funding is often utilised to rebuild the exact same infrastructure in the exact same places. In order to respond effectively and responsibly to climate change all departments need to integrate climate change into infrastructure build, and planning, and to utilise standards appropriate for a changed climate regime. Furthermore, critical ecological infrastructure is required to support and buffer built infrastructure (such as dune barriers, wetlands and mountain catchments - our "natural water towers").

10. Broadband penetration

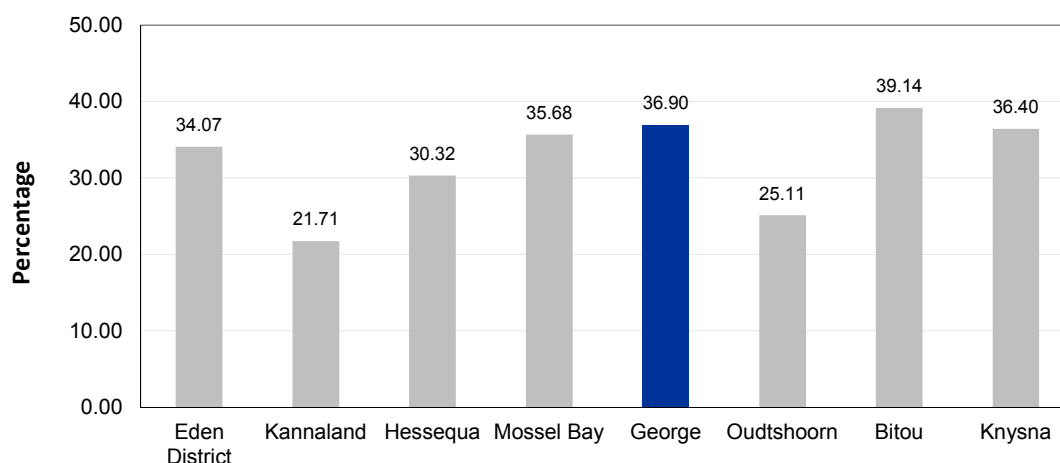

Broadband penetration offers immense economic benefits by fostering competition, encouraging innovation, developing human capital and by building infrastructure. Improved connectivity will attract new business and investments, reduce the cost of doing business and will offer small, medium and micro enterprises access to new markets.

The World Bank found that for every 10 per cent increase in broadband penetration in developing countries, there is an increase of 1.38 per cent in GDP growth. Municipal broadband initiatives (internet services provided by a municipality) also offer great potential for enhanced economic growth and development, provided they address the key pillars of access, readiness (skills) and usage (stimulating demand for the Internet).

Improved internet penetration and accessibility also offers direct benefits for local government entities to improve the efficiency and effectiveness of public services. These benefits include the roll-out of e-services that will allow for the online payment of municipal accounts, motor vehicle registrations, animal registrations, reporting of infrastructure defects, free indigent services applications, career applications as well as tender applications. Online feedback mechanisms via social media will also support the facilitation of public participation during the annual reporting process and will offer constituents a platform to express public satisfaction.

Greater connectivity will also allow public servants remote access to information such as previous traffic infringements, building plan applications and outstanding accounts, for example.

Figure 11 Eden District: Internet access, 2011

Source: Statistics South Africa, Census 2011

In the Eden District Municipality, 34.07 per cent of households had access to the internet in 2011. George Municipality compares favourably and, at 36.90 per cent, had the 2nd highest penetration rate in the District. This rate offers great potential for economic growth by improving access, readiness and usage of the Internet within the Municipality.

In order to improve access and stimulate usage of the Internet, the Western Cape Broadband Initiative will be implementing Wi-Fi hotspots at a provincial government building in every ward across the Province over the next three years. These hotspots will allow limited free access (250 Mb per month) to any citizen, as well as allow all gov.za websites to be accessed free of charge. In the Eden District Municipality, Wi-Fi hotspots will be installed in 79 wards in total.

11. Concluding remarks

George Municipality has the largest economy in the District, comprising 30 per cent of the District's GDP (or R10.3 billion of the District's R33.4 billion GVA) in 2013. However, the Municipality's economic growth rate was the 2nd lowest in the region, despite its relative large size. George recorded high growth rates (8.3 per cent) in its construction sector during the review period 2005 - 2013 but the Municipality's agriculture sector experienced a meagre growth rate of 1.0 per cent per annum.

George's general government and CSP services sector is the largest employer in the Municipality. A municipality's economic performance plays a significant role in shaping the socio-economic reality of the regions inhabitants. Given the Municipality's economic performance, the prevailing socio-economic conditions in the area are relatively favourable although a number of issues nevertheless remain to be addressed.

It is concerning that 7 931 households in the municipal area earn less than R400 a month. Approximately 95.8 per cent of households within George Municipality meet the minimum standard of access to water. This puts George close to the NDP target of 100 per cent access to water by 2030. George Municipality's 87.8 per cent of households that have their refuse removed at least once a week is slightly higher than the District but marginally lower than the provincial access levels. There is room for improvement in this regard. In terms of access to electricity, sanitation and housing, George Municipality's levels are higher than the District averages. Decreasing matric pass rates and below average literacy rates are a concern within the George municipal area. With regard to health, the Municipality's immunisation coverage rate is higher than the District average, but the high maternal mortality rate and high pregnancy termination rates are a cause for concern at George Municipality.

It is important that the Municipality takes cognisance of the information provided in this report (with particular reference to the areas within which there exists scope for improvement) if the holistic development of the inhabitants in the Municipality is to be achieved.
