

# WATER IS SCARCE, USE IT WITH CARE

## REDUCE THE FLOW OF WATER

Reduce water consumption by fitting low-flow shower heads and aerators to all taps.

## THE SHORTER THE BETTER

A quick shower is all that you need.  
Place a bucket in the shower with you to catch run-off water for reuse.

## REUSE GREY WATER

Grey water collected from showers, washing machines and industrial processes can be reused to flush toilets and wash outside floors.

## REPORT AND FIX LEAKS

Report any water leaks in your neighbourhood with your local municipality and fix any leaks on your property.

## FULL LOADS ONLY

Only wash when absolutely necessary.  
Ensure full loads when using washing machines and dishwashers.

## DON'T LET THE WATER RUN

Turn off taps when brushing your teeth, washing your hands and when water is not in use.

## NO DRINKING WATER FOR THIS

Absolutely no watering of gardens, washing of cars or surfaces and filling of swimming pools using drinking water allowed
