Foreword from the Department

The Department of Environmental Affairs and Development Planning initiated a strategy to stimulate the recycling Economy in 2007 with the aim of contributing towards economic growth and job creation in the Western Cape.

The “Buy Recycled” campaign forms an integral part of the strategy aimed at diverting waste from our overfilled landfills in the province. The campaign also serves as reminder that we are discarding valuable resources, which can have tremendous economic benefits for our society if the waste material is recycled and introduced into the value chain again.

Furthermore, the manufacture of products with recycled content requires less energy than products made strictly with virgin material. It therefore reduces the amount of green house gas emissions and has less impact on climate change.

A Recycled Products Catalogue was developed and launched in 2008 as part of a marketing campaign to stimulate the demand for recycled material. This catalogue was well received by the public and recycling industry. To build on the success of the 2008 catalogue the Department has updated the catalogue, which will be marketed and distributed throughout the Western Cape.

This 2009 catalogue will make it easier to find and buy products which will do the least harm to the environment when they are produced. Buying these products means acting on a worldwide mindset change, which recognizes that we need to save our planet by living more sustainably.

By supporting the principles of the sustainable triple bottom line we contribute as citizens in realising a golden opportunity for economic renewal and growth in the face of the current global crisis. This will undoubtedly benefit citizens in our province.

Minister Anton Bredell
Minister Local Government
Environmental Affairs and Development Planning
Provincial Government of the Western Cape

Welcome!

This is the second edition of a Recycled Products Catalogue for the Western Cape and, we believe, South Africa.

In it you will find a range of items for homeware, garden, outdoor, clothing and accessories - made of waste materials recovered in the Western Cape and recycled into new unique products.

The product selection process included advertisements in the regional press calling for product listing, research with recycling companies and referrals from contacts and stakeholders in the industry.

Buying recycled saves on new materials and energy required for mining, processing and transport – which in turn reduces carbon and methane greenhouse gas emissions and climate impacts.

Use this catalogue as a handy guide to closing the loop as part of your contribution to the community and environment.

2Wise2Waste

The “Buy recycled” Campaign is about stimulating the Recycling Economy and forms part of the Department’s 2Wise2Waste eco-efficiency programme which promotes resource efficiency by reducing our impact on natural resources, energy efficiency and climate change.

The programme has the following objectives:

- To promote the efficient use of raw materials, water and energy which will reduce the carbon footprint;
- To change behaviour through knowledge sharing, education and awareness.

The programme has both an internal and external focus and comprises of the following:

- Recycling Economy Programme which focus on securing of the supply of recovered waste material and to promote the demand for products made from recycled material;
- Cleanest Town Competition which promotes and celebrates sustainable waste management practices within municipalities;
- Waste Management in Education which focus on the training of educators to bring about to the learners via the curriculum how to manage their waste sustainably;
- Development of a Green Procurement Policy for provincial government will ensure that goods and services which are procured will be more environmentally friendly and therefore have a lesser impact on the environment; and
- Internal focus on the Departments of the Provincial Government to reduce the environmental impacts of operations by promoting efficient resource use through behaviour change, recovering of waste material and the retrofitting of buildings.

Disclaimers

1. The Provincial Government cannot endorse companies, individuals, or organisations or their products listed, in this catalogue, which is produced as a public service to stimulate the recycling economy of the Western Cape.

2. While all reasonable effort has been made to ensure accuracy, the Provincial Government of the Western Cape and their service providers cannot be held liable for errors of fact or omission.

Recycled content (estimated): 38%

NOTES

NOTES

The recycling loop

BUYING RECYCLED HAS MANY BENEFITS.

When you close the loop and buy products made from recycled materials you save energy, prevent pollution and create employment.

Making products from recycled materials saves between 35 to 90 per cent of the energy that is needed to extract, refine and manufacture products from new raw materials.

Closing the loop also reduces the amount of pollutants and toxins released from energy generation.

It is estimated that ten times more jobs are associated with recycling and the manufacturing of goods from recycled products than with waste disposal.

Look out for products with recycled content when you buy, and recycle and reduce your environmental impact at work and home.

(Source: Solid Waste & Recycling magazine, December/January 2007 edition)

HOMEWARE & GIFTS

GARDEN & OUTDOOR

Find a wide range of products for home, work and play in this catalogue - all made with recycled material.

You're not recycling until you're buying recycled!

INDUSTRIAL

CLOTHING & ACCESSORIES

Making products from recycled materials diverts waste from landfills and returns them into the manufacturing stream. 'Closing the loop' this way saves on materials and energy for mining, processing and transport, which in turn reduces carbon and methane greenhouse gas emissions and climate change impacts. Recycling creates added employment and small business opportunities.

BUILDING & CONSTRUCTION

OFFICE PRODUCTS

Produced by the Provincial Department of Environmental Affairs and Development Planning as part of the 2Wise2Waste programme - one of the Province's eco-efficiency initiatives.

PACKAGING

2Wise2Waste

♻️ Printed on recycled paper.
