## Introduction

Regional profiles provide the Western Cape municipalities with valuable data and information which assist in planning, budgeting and the prioritisation of municipal services. It is acknowledged that municipalities across the Western Cape have different capacities and therefore will use the information in this publication to suit their own needs.

The 2015 Socio-economic Profiles builds upon the success of previous editions by providing updated information relating to demographics, education, health, poverty, safety and security, basic service delivery, economy, labour market and environmental management. New information has also been added in the form of ward specific basic service delivery statistics, broadband penetration rates as well as municipal specific Wi-Fi roll-out data.

The profile furthermore complements the socio-economic performance analysis of the Municipal Economic Review and Outlook (MERO) 2015 which was published in October 2015.

In all, the profile reflects the socio-economic reality of municipalities. As such, valuable insight can be gained as to the developmental challenges faced by communities residing within a specific geographical area.

This profile primarily uses data sourced from Statistics South Africa, administrative data from sector departments, the 2015 MERO and Quantec. The data sourced from sector departments are the most recent that is available. The latest survey data available at municipal level from Statistics South Africa includes the 2011 Census, whilst comparisons are also made with the 2001 Census. The updated population forecasts by the Department of Social Development will assist municipalities with future planning.

The information contained in this profile therefore highlights information for the **Overstrand Municipality** in relation to the broader Western Cape Province.

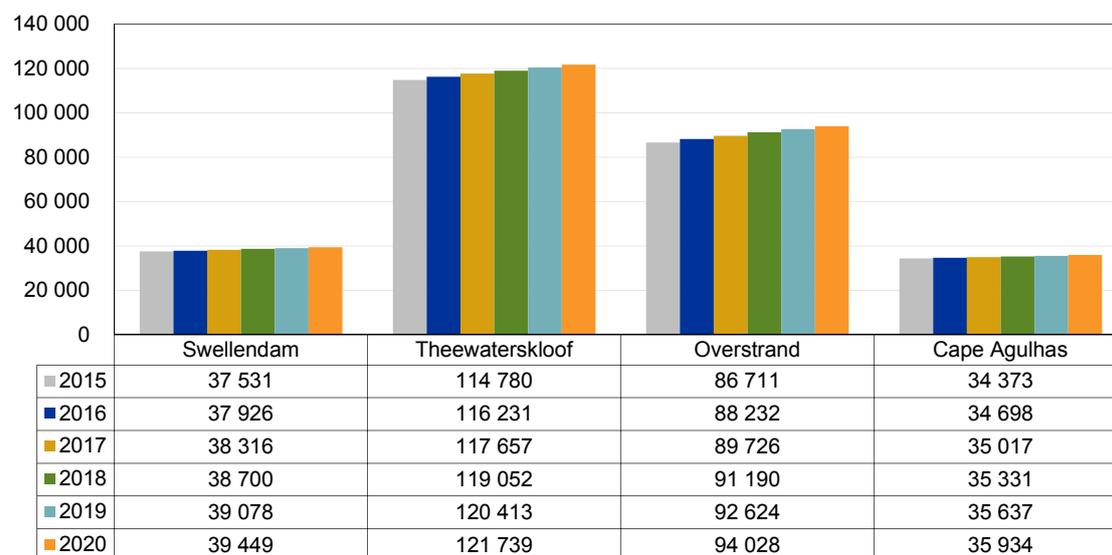

## 1. Demographics

### 1.1 Population

As per Census 2011, the Western Cape population composes of 11.25 per cent of the total population of the country with 5.8 million persons, having increased from 4.5 million in 2001. Thus the Western Cape population grew at a rate of 2.6 per cent per annum between 2001 and 2011. This is faster than the national population growth rate of 1.5 per cent and is largely due to immigration to the Western Cape, where individuals believe they can obtain jobs and better standards of living.

From this strong growth base, the Western Cape Department of Social Development was able to make population growth estimates for each municipality for the period 2015 - 2020. These projections will assist municipalities to align their budget allocations with basic service delivery priorities.

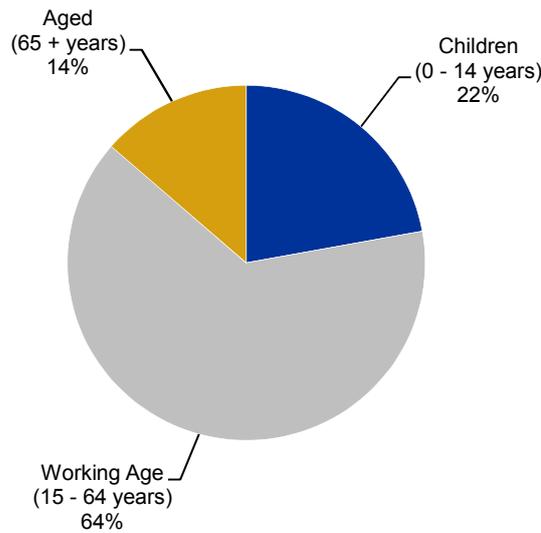

**Figure 1 Overberg District municipalities: Population projections, 2015 - 2020**

Source: Western Cape Department of Social Development, 2015

Overstrand ranks second in terms of population size within the Overberg District with 86 711 people in 2015 compared to 114 780 people in Theewaterskloof for the same year. Overstrand Municipality's population is projected to rise to 94 028 people in 2020.

**Figure 2 Overstrand: Population age cohort, 2014**

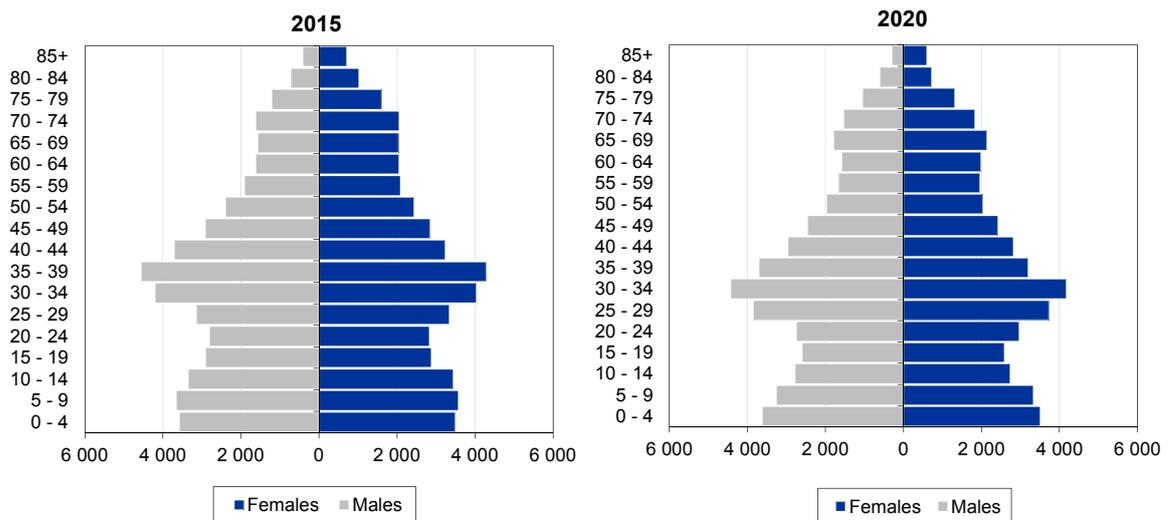

Source: Western Cape Department of Social Development, 2015

Figure 2 reflects the population age distribution of Overstrand for 2015 and reveals that approximately 64 per cent of the 86 711 inhabitants of the Municipality are currently considered to be within the working age category.

These figures reveal that Overstrand has a total dependency ratio of 55.7 which is slightly higher than the 2013 total of 49.3. As higher dependency ratios imply greater strain on the working age to support their economic dependants (children and aged), this increase does not bode well for improved social security and enhanced economic growth.

**Figure 3 Overstrand: Population age distribution, 2015 and 2020**

Source: Western Cape Department of Social Development, 2015

A population pyramid is a visual representation of a society's age and gender distribution and provides policymakers and scholars alike with valuable insight as to fertility, mortality and immigration rates.

Figure 3 reflects the population pyramid for the Overstrand region for 2015 and 2020. Both figures tend to have a wide bottom base that gradually narrows in the upper age cohorts in line with the provincial trend.

The increase in the working population aged 20 - 34 compared to those aged 0 - 14 is an indication of in migration of workers looking for jobs in the area. When comparing the shape of the 2015 and 2020 population pyramids it becomes evident that most of the age groups have increased between 2015 and 2020.

## 1.2 Households

In addition to population projections, the projections on the number of households form the basis of municipal service delivery planning and essentially inform budget allocations towards basic services such as water, electricity, sanitation and refuse removal. It is therefore vital that for budget planning and implementation purposes a municipality rely on credible and accurate household estimates.

**Table 1 Overberg District: Household estimates, 2011 - 2015**

Municipality	2011	2012	2013	2014	2015
Overberg District	78 251	79 424	80 614	81 835	83 072
Theewaterskloof	29 794	30 322	30 857	31 404	31 952
Overstrand	27 351	27 723	28 103	28 494	28 892
Cape Agulhas	10 567	10 698	10 834	10 969	11 110
Swellendam	10 539	10 681	10 820	10 968	11 118

Source: Quantec Research, 2015

As per Table 1, the total number of households in the Overstrand Municipality was estimated to be 28 892 in 2015, a projected increase of 1 541 households (or 5.6 per cent) since 2011.

*Please note: The Municipality noted that above population and household estimates differ from the growth trajectories envisioned by the most recent census data.*

*These differences can mostly be ascribed to the methodologies used by the Department of Social Development (population age distribution) and Quantec (household estimates). Average household sizes in the Western Cape have been steadily decreasing over time. Therefore, it is to be expected that the number of households will grow at a faster rate than the population growth rate. In the first instance, the Department of Social Development adjust their estimates as to compensate for the extent of undercount in Census 2011 (which was estimated to be 18 per cent for the Western Cape). In turn, Quantec's methodology incorporates various datasets (Census 1996, 2001, 2011, Stats SA midyear estimates, ASSA projections etc.) to derive their own household estimates. Quantec also factors in the extent of census undercount. The methodology used by Quantec and the Department of Social Development does not differ significantly. However, the*

assumptions used when applying the methodology do differ. Quantec uses mainly provincial level assumptions whereas the Department used municipal and district municipal level assumptions as far as possible. Another difference is that the Department used Health and WCED data to try and test the validity of its assumptions. It is unclear how Quantec determine the validity of their assumptions.

## **2. Education**

Education and training improves access to employment opportunities and helps to sustain and accelerate overall development. It expands the range of options available from which a person can choose to create opportunities for a fulfilling life. Through indirect positive effects on health and life expectancy, the level of education of a population also influences its welfare.

### **2.1 Literacy**

Literacy is used to indicate a minimum education level attained. A simple definition of literacy is the ability to read and write, but it is more strictly defined as the successful completion of a minimum of 7 years of formal education. Since most learners start school at the age of 7 years, the literacy rate is calculated as the proportion of those 14 years and older who have successfully completed a minimum of 7 years of formal education. The literacy rate in Overstrand was recorded at 87.5 per cent in 2011 which is slightly higher than the average literacy rate of the Western Cape at 87.2 per cent.

### **2.2 Learner enrolment, the learner-teacher ratio and learner dropout rate**

Population dynamics, which include knowledge of the current population profile and projected learner growth, provide a basis for sound education planning. Knowing the learner enrolment numbers of a municipality enables the Western Cape Education Department (WCED) to determine the level of demands placed on schools for the current year as well as anticipated demands for future years. Having a sense of the exit points allows the WCED to plan more effectively with respect to Further Education and Training (FET). The learner-teacher ratio is very important, because it is closely related to the amount of money spent per child. It also has an impact on the education outcomes.

**Table 2 Overberg District municipalities: Education indicators**

Municipality	Learner enrolment		Dropout rate		Learner-teacher ratio	
	2013 (Gr 1 - 12 + LSEN)	ASS 2014	Average dropout rate 2012	Crude dropout rate using Yr 2013 - Gr 10 and Yr 2015 - Gr 12	Average learner-teacher ratio 2012	ASS 2014: ALL state+sgb+ substitutes teachers excl. practitioners and other
Theewaterskloof	18 488	18 245	40.80%	31.30%	27.50	30.30
Overstrand	11 866	11 118	49.50%	32.30%	25.50	31.40
Cape Agulhas	4 621	4 527	37.90%	23.70%	28.10	28.80
Swellendam	5 771	5 652	34.70%	22.00%	27.60	29.30

Source: Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014

According to the Annual Survey of Public and Independent Schools (ASS) done by the WCED in 2014, learner enrolment in Overstrand has decreased slightly from 11 866 in 2013 to 11 118 in 2014. This might be due to the fact that learner enrolment in 2013 included learners with special education needs. The average school dropout rate in Overstrand was recorded at 49.5 per cent in 2012 and is the highest in the District. However, the dropout rate measured amongst Grade 10 learners of 2013 and Grade 12 learners at the start of 2015 was 32.3 per cent. The average learner-teacher ratio for Overstrand increased from 25.5 in 2012 to 31.4 in 2014.

### 2.3 Education facilities

The availability of adequate education facilities such as schools, FET colleges and schools equipped with libraries and media centres could affect academic outcomes positively. Overstrand had 17 schools in 2014 which had to accommodate 11 118 learners at the start of 2014. The proportion of no fee schools has increased marginally from 70.58 per cent in 2012 to 70.60 per cent in 2014 indicating that, given the tough economic climate, schools have been reporting an increase in parents being unable to pay their school fees. In an effort to alleviate some of the funding challenges the Western Cape Department of Education offered certain fee-paying schools to become no fee schools. Overstrand, has six (6) Public FET Colleges whose mandate is to ensure that education, training and skills development initiatives respond to the economy, rural development challenges and an informed and critical citizenry. The number of schools in Overstrand with libraries or media centres was 13 in 2014, down from 16 in 2012.

**Table 3 Overberg District municipalities: Education facilities, 2012 and 2014**

Municipality	Total number of schools 2014 Dec	Number/proportion of no fee schools		Public FET colleges - main + sat ASS 2014 Lib	Education facilities: Number of schools with libraries/media centres	
		2012	2014 Dec		2012	2014
Theewaterskloof	38	73.68%	81.60%	16	26	26
Overstrand	17	70.58%	70.60%	6	16	13
Cape Agulhas	10	80.00%	80.00%	5	7	6
Swellendam	19	78.94%	79.00%	6	8	8

Source: Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014

## 2.4 Educational outcomes (matric pass rate)

Education remains one of the key avenues through which the state is involved in the economy. In preparing individuals for future engagement in the labour market, policy choices and decisions in the sphere of education play a critical role in determining the extent to which future economic and poverty reduction plans can be realised.

**Table 4 Overberg District: Education outcomes, 2013 - 2014**

Municipality	Education outcomes: Matric pass rate	
	2013	2014
Overberg District	89.8%	88.1%
Theewaterskloof	88.8%	88.8%
Overstrand	92.0%	86.4%
Cape Agulhas	92.1%	87.8%
Swellendam	86.9%	88.2%

Source: *Western Cape Department of Education, Annual Survey of public and independent Schools (ASS) 2014*

The 2014 matric results for Overstrand was at 86.4 per cent, down from 92.0 per cent in 2013, the lowest for district. This may be due to the more stringent standards applied in the setting and marking of the papers affecting the number of learners passing.

## 3. Health<sup>1</sup>

Good health is vital to achieving and maintaining a high quality of life. A diverse range of factors play a role in ensuring the good health of communities and that disease, especially preventable and contagious/communicable ones, are kept at bay. Some of the factors include lifestyle features that also depend on the provision of high quality municipal services, such as clean water, sanitation and the removal of solid waste.

The information provided by the Department of Health as detailed in this section, pertains only to public sector healthcare institutions. Any privately provided facilities or services are not reflected in the information below.

### 3.1 Healthcare services: Facilities and personnel

Access to healthcare facilities is directly dependent on the number and spread of facilities within a geographic space. South Africa's healthcare system is geared in such a way that people have to move from primary, with a referral system, to secondary and tertiary levels.

<sup>1</sup> Information received from the Western Cape Department of Health including information from the Department's 2015/16 Annual Performance Plan and the Department's website.

The Overberg District has a range of primary healthcare facilities which includes 17 fixed clinics, 23 mobile/satellite clinics, 2 community day centres and 4 district hospitals.

**Table 5 Overberg District: Healthcare facilities, 2015**

Municipality	Number of PHC clinics - fixed	Number of PHC clinics - non-fixed (mobile/satellite)	Community Health centres	Community Day centres	Total number of PHC facilities (fixed clinics, CHCs and CDCs, excluding non-fixed)	Number of district hospitals	Number of regional hospitals	Emergency medical services: Number of operational ambulances per 100 000 population
Overberg District	17	23	0	2	19	4	0	0.86
Theewaterskloof	5	11	0	1	6	1	0	1.02
Overstrand	4	5	0	1	5	1	0	0.58
Cape Agulhas	3	4	0	0	3	1	0	0.84
Swellendam	5	3	0	0	5	1	0	1.02

Source: Western Cape Department of Health, 2015

Of these facilities, 4 fixed clinics, 5 mobile/satellite clinics, 1 community day centre and 1 district hospital are situated within Overstrand Municipality.

Due to rural distances between towns and health facilities being much greater than in the metropole, combined with the relatively lower population per square kilometre in rural areas, ambulance coverage is greater in rural areas in order to maintain adequate coverage for rural communities. Within the Overberg District, Overstrand (0.58) has the lowest number of ambulances per 100 000 population.

**Table 6 Western Cape: Healthcare personnel, 2015**

Regional area	Number of medical officers*	Number of professional nurses*	Number of staff nurses*	Number of nursing assistants*
City of Cape Town	42.1	107.8	42.4	79.1
West Coast District	9.3	63.8	31.8	34.8
Cape Winelands District	22.3	84.8	41.4	49.2
Overberg District	11.5	70.6	24.7	31.9
Eden District	20.7	97.1	39.0	45.8
Central Karoo District	19.4	132.8	38.7	74.7
Western Cape	33.4	99.2	40.3	66.5

\* Per 100 000 people

Source: Western Cape Department of Health, 2015

Healthcare personnel is also variedly spread across the districts; overall within the Western Cape, the Overberg District had the lowest numbers of medical officers and professional nurses per 100 000 people and the second lowest number of staff nurses and nursing assistants per 100 000 people.

### 3.2 HIV, AIDS and Tuberculosis treatment and care

Although treatment and care is essential in the management of HIV and AIDS, the need and importance of preventative care cannot be over-emphasised, especially since to date, there is no known cure.

**Table 7 Overberg District: HIV, AIDS and Tuberculosis prevalence and care, 2015**

Municipality	HIV - Antiretroviral treatment					Tuberculosis			
	ART patient load March 2013	ART patient load March 2014	ART patient load March 2015	Mother-to-child transmission rate	Number of ART clinics/ treatment sites 2015	Number of TB patients 2012/13	Number of TB patients 2013/14	Number of TB patients 2014/15	Number of TB clinics/ treatment sites 2015
Overberg District	4 907	6 182	7 233	1.3%	19	2 175	2 103	2 120	43
Theewaterskloof	2 150	2 757	3 202	0.9%	7	1 076	1 065	1 105	19
Overstrand	2 034	2 506	2 948	2.1%	4	605	602	551	8
Cape Agulhas	299	372	464	0.0%	3	207	182	207	7
Swellendam	424	547	619	0.0%	5	287	254	257	9

Source: Western Cape Department of Health, 2015

At the end of March 2013, the Province highlighted that anti-retroviral treatment (ART) was provided to over 100 000 persons in the Province, 4 907 of whom were in the Overberg District and 2 034 in the Overstrand municipal area. By the end of March 2015, Overstrand's patient load increased to 2 948, administered from 4 treatment sites.

In addition to improving the quality of life of the patient, anti-retroviral treatment to mothers both before and at birth, also decreases the chances that infants will contract HIV from their mothers. The most recent information for Overstrand indicates a mother-to-child transmission rate of 2.1 per cent which is above the 1.3 per cent District rate as well as the medium term annual target for 2015/16 and 2016/17.

Tuberculosis (TB) is a bacterial disease, and is a serious problem in South Africa, especially in the Western Cape. TB is highly infectious but curable. Approximately one out of ten people develop the disease and if not treated the infectious person can affect 20 other people or more in a year.

TB can only be cured if the full course of treatment, which can be from six to eight months, is completed. People who stop treatment are likely to develop multi-drug resistance, making the TB more difficult to cure. These cases are treated at TB specialist clinics. TB can be fatal if not treated.

The HIV epidemic has led to an enormous increase in the number of TB cases. People with HIV are far more susceptible to TB infection, and are less able to fight it off. TB is responsible for a third of all deaths in HIV-infected people.

The number of TB patients in the Overberg District has decreased over past few years, reaching 2 120 in 2014/15, treated at 43 clinics or treatment sites. In the Overstrand municipal area, patient load has also shown a decline in recent years. Most recent information shows a patient load of 551 with treatment administered from 8 clinics or treatment sites.

### 3.3 Child health: Immunisation<sup>2</sup>, malnutrition, neonatal mortality, low birth weight

**Immunisation:** Immunisation protects both adults and children against preventable infectious diseases. Low immunisation rates speak to the need for parents to understand the critical importance of immunisation, as well as the need to encourage parents to have their young children immunised. In 2015, the full immunisation coverage rate for the Overberg District was 80 per cent and slightly higher in Overstrand at 81 per cent.

**Malnutrition:** Malnutrition (either under- or over nutrition) refers to the condition whereby an individual does not receive adequate amounts or receives excessive amounts of nutrients. The number of malnourished children under five years in the Overberg District in 2015 was 1.54 per 100 000. At 1.87, Overstrand's rate was the highest in the District.

**Table 8 Overberg District: Child and maternal health, 2014/15**

Municipality	Child health				Maternal health		
	Full immunisation coverage under 1 year	Severely malnutrition rate under 5 years	Neonatal mortality rate	Low birth weight	Maternal mortality ratio	Delivery rate to women under 18 years	Termination of pregnancy rate
Overberg District	80%	1.54	7.7	14%	0.0	8.0%	7.0%
Theewaterskloof	82%	1.65	10.1	15%	0.0	9.5%	5.1%
Overstrand	81%	1.87	6.9	12%	0.0	6.0%	12.4%
Cape Agulhas	77%	0.72	12.0	14%	0.0	8.3%	3.2%
Swellendam	72%	1.17	0.0	13%	0.0	9.0%	4.5%

Source: Western Cape Department of Health, 2015

**Neonatal mortality rate:** The first 28 days of life - the neonatal period - represent the most vulnerable time for a child's survival. The neonatal mortality rate is the number of neonates dying before reaching 28 days of age, per 1 000 live births in a given year. Both the District (7.7) as well as Overstrand's (6.9) neonatal mortality rate is above the Province's 2019 target of 6.0 per 1 000 live births.

**Low birth weight:** Low birth weight is defined as weight at birth of less than 2 500 g. Low birth weight is associated with a range of both short and long term consequences. In the Overstrand area, 12 per cent of babies had a low birth weight.

### 3.4 Maternal health: Maternal mortality, births to teenage mothers, termination of pregnancy

Maternal health refers to the health of women during pregnancy, childbirth and the postpartum period.

<sup>2</sup> The immunisation rate is calculated as the number of children immunised as a percentage of the total number of children less than one year of age. If children who are one year or older are immunised, the immunisation rate for that year could be greater than 100 per cent because more than 100 per cent of children aged less than one year would have been immunised in that particular year.

**Maternal mortality<sup>3</sup>:** Maternal death is death occurring during pregnancy, childbirth and the puerperium<sup>4</sup> of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of pregnancy and irrespective of the cause of death (obstetric and non-obstetric). Overstrand Municipality has a zero maternal mortality ratio per 100 000 live births.

**Births to teenage mothers:** Teenage pregnancy is almost always unplanned; as a result when young parents are placed in a position to care for their children, life can become particularly tough, especially if they do not have family or social support.

In the 2014/15 financial year, the delivery rate to women under 18 years in the Overberg District was 8.0 per cent. Overstrand's rate of 6.0 per cent was the lowest in the District.

**Termination of pregnancy:** Government hospitals, designated private doctors and gynaecologists, and non-profit providers offer safe and legal termination of pregnancy. To have a free abortion, the request must be made at a primary healthcare clinic, where the pregnancy will be confirmed, counselling provided, an appointment made, and a referral letter be given to a facility where the procedure can be performed.

Overstrand's termination of pregnancy rate<sup>5</sup> of 12.4 per cent is higher than the District's average of 7.0 per cent. Reading the teenage delivery and termination of pregnancy rates together suggests that, especially within some local municipalities, there may be a particular challenge with respect to unplanned and unwanted pregnancies.

### 3.5 Community based services

Community Based Services (CBS) in the Western Cape are provided by non-profit organisations (NPOs). Home CBS does not replace the family as the primary caregiver; it is meant to be a complementary and supportive service to the family to prevent 'burn-out' for family caregivers who care for sick relatives.

**Table 9 Overberg District: Community based services, 2015**

Municipality	Community based services		
	Total number of non-profit organisation appointed home carers	Total number of visits	Average number of monthly visits per carer
Overberg District	244	558 196	191
Theewaterskloof	102	219 921	180
Overstrand	70	151 204	180
Cape Agulhas	37	116 376	262
Swellendam	35	70 695	168

Source: Western Cape Department of Health, 2015

<sup>3</sup> Maternal deaths per 100 000 live births in health facilities.

<sup>4</sup> Puerperium is defined as the time from the delivery of the placenta through the first few weeks after the delivery. This period is usually considered to be 6 weeks in duration.

<sup>5</sup> Termination of pregnancy rate is calculated as the percentage of terminations as a proportion of the female population aged 15 to 44 years.

The total number of NPOs appointed carers in Overberg District during 2014/15 was 244. On average, each carer carried out an average of 191 monthly visits. Within Overstrand Municipality, the average number of monthly visits for the 70 carers was lower at 180.

## 4. Poverty

In an effort to alleviate poverty and reduce inequality, the National Development Plan has set the objective of having zero households earn less than R418 per month by 2030.

**Table 10 Overberg District: Household income, 2011**

Municipality	None income	R1 - R4 800	R4 801 - R9 600	R9 601 - R19 600	R19 601 - R38 200	R38 201 - R76 400	R76 401 - R153 800	R153 801 - R307 600	R307 601 - R614 400	R614 001 - R1 228 800	R1 228 801 - R2 457 600	R2 457 601 or more
Overberg District	12.7	2.1	3.5	14.5	21.2	18.1	12.8	8.9	4.4	1.2	0.3	0.2
Theewaterskloof	11.8	1.9	3.4	17.7	22.9	19.1	11.4	7.0	3.6	0.9	0.2	0.2
Overstrand	16.4	2.9	4.1	12.0	17.4	15.6	13.7	10.3	5.2	1.7	0.4	0.3
Cape Agulhas	9.6	1.4	2.5	12.7	22.8	19.9	14.2	10.6	4.7	1.2	0.3	0.2
Swellendam	7.9	1.3	3.1	14.3	25.3	20.5	13.4	8.3	4.4	0.9	0.3	0.3

Source: Statistics South Africa, Census 2011

Measuring levels of poverty and inequality for the period 2006 to 2011, Statistics South Africa's 2014 Poverty Trends Report specifies that the lower-bound poverty line (LBPL) for March 2011 was set at R443 (per capita, inflation adjusted poverty line) meaning that any individual earning less than R443 a month would have to sacrifice essential food items in order to obtain non-food goods. Compared to the above specified average household income for the Overstrand Municipality, 19.3 per cent of households in the municipal area earn less than R400 a month and therefore fall below the LBPL.

**Table 11 Overberg District: Per capita income, 2011 - 2013**

Regional area	Per capita income (R)		
	2011	2012	2013
Western Cape	43 614	44 291	44 553
Overberg District	29 615	30 220	30 403
Theewaterskloof	25 182	25 593	25 692
Overstrand	32 052	32 744	33 082
Cape Agulhas	40 191	41 304	41 536
Swellendam	27 212	27 732	27 785

Source: Own calculations, Department of Social Development, 2015 and Quantec, 2015

As per Table 11, per capita income in the Overstrand Municipality is substantially lower than that of Cape Agulhas but is higher than that of the District.

However, per capita income in Overstrand increased by 1.03 per cent, from R32 744 in 2012 to R33 082 in 2013; at a substantially higher rate compared to the other municipalities in the District. Although these figures bodes well as a general measure of wealth and prosperity, the Municipality needs to make significant progress if it is to achieve the 2030 NDP target of R110 000 per person, per annum.

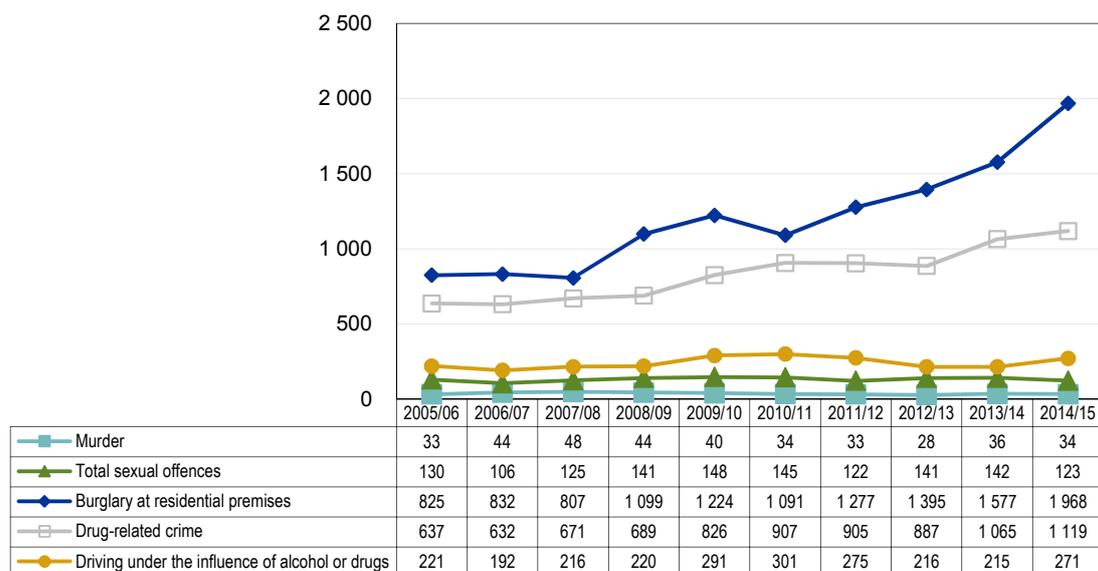

## 5. Safety and security

The Constitution upholds the notion that everybody has the right to freedom and security of the person. The safety of persons and property is therefore vitally important to the physical and emotional well-being of people and business. Without the respect of person and property, it would be impossible for people to live peacefully, without fear of attack and for businesses to flourish.

The extent of crime in South Africa does however not only have a significant impact on the livelihood of citizens, but also affects the general economy. Crime hampers growth and discourages investment and capital accumulation. If not addressed with seriousness, it has the potential to derail both social and economic prosperity.

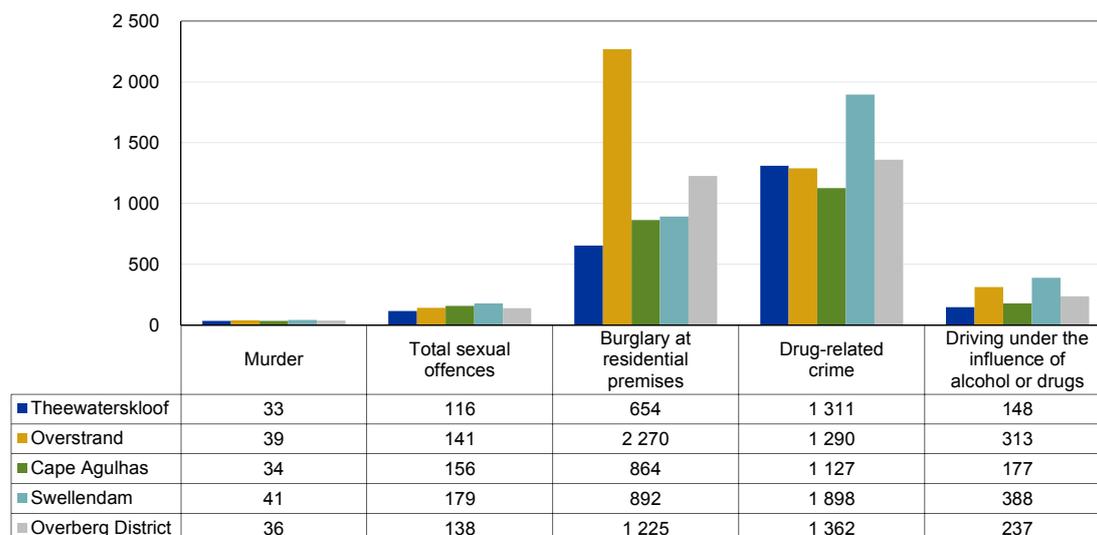

Peoples' general impressions, as well as official statistics on safety and crime issues, mould perceptions of areas as living spaces or place in which to establish businesses. The discussion in this section that follows is limited to the reported contact and property-related crime such as murder and sexual crimes, as well as crime heavily dependent on police action for detecting drug-related crimes and driving under the influence of alcohol/drugs.

**Figure 4 Overstrand: Crime statistics, 2005/06 - 2014/15**

Source: South African Police Service, 2014/15

The categories of crime pertaining to residential burglaries and drug-related crime are dominant within the Overstrand municipal area. Reported burglaries at residential premises and drug-related crimes continued on its upward trend since 2011/12 and 2013/14 respectively. The number of murders and sexual offences appear to have declined since 2013/14, whilst driving under the influence of alcohol or drugs has increased. Overall all crimes excluding sexual offences have increased from their 2005/06 numbers.

**Figure 5 Overberg District: Crime statistics 100 000 population, 2014/15**

Source: South African Police Service, 2014/15

It is customary to express occurrences of crime per 100 000 as to allow for an easy comparison between areas with different population densities.

It is evident from Figure 5 that drug-related crimes - possession, manufacturing, distribution of illegal substances (including alcohol related transgressions) - is a major concern throughout the Overberg District with an average of 1 362 crimes per 100 000 and 1 290 in Overstrand Municipality. Drug-related crimes have a severe negative impact on human development by degrading the quality of life as it infiltrates all aspects of society including families, health, the work environment and the economy. Given its regular occurrence and the psychological impact on victims, residential burglaries are an obstinate concern in South Africa. The Overberg District is no exception, with residential burglaries being the second most prominent criminal offence among all local municipalities at an average of 1 225 occurrences per 100 000. Overstrand has the highest incident of burglaries at residential premises within the District at 2 270 per 100 000 population.

## 6. Basic services

Access to basic services within South Africa is a basic human right. It is also an indication of the quality of life of the inhabitants in the country. Access to basic services has a wider impact on education and health and therefore also on the economy. The 2015 Municipal Economic Review and Outlook further highlight the positive economic impact of basic infrastructure spending on the overall economy.

The levels of access to basic services will be discussed below in terms of access to water, sanitation, energy, refuse removal and housing. The 2015 Socio-economic Profile also contains a breakdown of access to basic services for each ward within Overstrand Municipality, hereto attached as an Annexure. This information provides the Municipality with an overview of ground-level access to basic services that will assist in the allocation of resources towards the areas of most need. This data will also

in inform the Municipality's IDP and service delivery budget and implementation plan (SDBIP), the latter which, as per MFMA Circular 13, must contain a ward-specific capital works plan.

## 6.1 Access to water

Table 12 indicates the levels of access to potable water within the Overberg District in 2014.

**Table 12 Overberg District: Access to water, 2014**

Regional area	Piped water inside dwelling	Piped water inside yard	Piped water less than 200 m from dwelling	Piped water more than 200 m from dwelling	Borehole/ rain-water tank/ well	Dam/ river/ stream/ spring	Water-carrier/ tanker/ water vendor	Other/ Unspecified
Western Cape	74.1	13.8	8.7	2.5	0.1	0.1	0.1	0.6
Overberg District	75.0	12.7	9.6	1.9	0.1	0.2	0.1	0.4
Theewaterskloof	72.0	14.0	10.7	2.4	0.0	0.2	0.1	0.5
Overstrand	74.5	13.2	10.7	1.0	0.1	0.1	0.0	0.3
Cape Agulhas	81.3	8.7	7.4	2.0	0.2	0.0	0.1	0.3
Swellendam	78.6	11.7	5.8	2.3	0.2	0.5	0.3	0.6

Source: Quantec Research, 2015

The data indicates that in Overstrand, 74.5 per cent of households have access to water within their dwellings and a further 13.2 per cent have access within their yard. The minimum service level is households that have access to water at least 200 m from their dwelling. Approximately 98.4 per cent of households meet this minimum standard. Overstrand outperforms both the provincial and district average in this regard. There is however room for improvement in terms of household access to water within their homes.

The Blue Drop Certification reflects on the actual quality of tap water within a municipality. It further acknowledges a municipality's ability to sustain this quality and provides an indication of preparedness to deal with any incident that may pose a water related health risk to the public.

The certification process attributes a weighted score according to a municipality's performance measured against a specific set of water management criteria such as water safety planning, drinking water quality process management and control, drinking water quality compliance etc. Municipalities that achieve overall scores above 95 per cent are officially awarded the prestigious Blue Drop Status.

In 2011, Overstrand had a blue drop status of 96.82 per cent. Overstrand continues to increase capacity and improve and maintain water infrastructure to provide a sustainable source of potable water to its households.

## 6.2 Access to refuse removal

Inadequate waste services lead to unpleasant living conditions and a contaminated, unhealthy environment. For this reason municipalities across the country provide their inhabitants with waste removal services.

Table 13 displays the levels of access to refuse removal within the Overberg District in 2014.

**Table 13 Overberg District: Access to refuse removal, 2014**

Regional area	Removed at least once a week	Removed less often	Communal refuse dump	Own refuse dump	No rubbish disposal	Unspecified/other
Western Cape	0.6	89.8	1.2	2.8	4.6	1.0
Overberg District	1.9	82.7	1.9	2.2	10.2	1.1
Theewaterskloof	2.6	79.3	3	2.1	11.5	1.6
Overstrand	1.8	90.9	0.7	2.2	3.9	0.5
Cape Agulhas	0.8	79.3	1.3	2.6	15	0.9
Swellendam	1.3	74.2	2.7	2.4	18.3	1.1

Source: Quantec Research, 2015

The data indicates that within Overstrand 90.9 per cent of households have their refuse removed at least once a week. This is much higher than that of its fellow municipalities.

## 6.3 Access to electricity

Table 14 reflects the different sources of energy used for lighting by households in Overstrand.

**Table 14 Overberg District: Access to electricity, 2014**

Municipality	Electricity	Gas	Paraffin	Candles	Solar/other/unspecified
Overberg District	90.6	0.3	4.3	4.1	0.7
Theewaterskloof	88.4	0.1	6.9	4.0	0.5
Overstrand	89.3	0.5	4.5	4.7	1.0
Cape Agulhas	96.7	0.5	0.3	2.0	0.4
Swellendam	94.3	0.1	0.2	4.7	0.7

Source: Quantec Research, 2015

Table 14 indicates that the biggest source of energy in Overstrand is electricity at 89.3 per cent in 2014. This is slightly below the Overberg District average of 90.6 per cent for 2014.

## 6.4 Access to sanitation

Access to sanitation is one of the most important basic services as it concerns the health and dignity of human beings. Table 15 shows the type of sanitation facilities available to households in Overstrand in 2014.

**Table 15 Overberg District: Access to sanitation, 2014**

Municipality	Flush or chemical toilet	Pit latrine	Bucket latrine	Not listed elsewhere
Overberg District	88.9	1.7	1.2	8.1
Theewaterskloof	86.2	2.1	1.0	10.7
Overstrand	92.9	1.1	1.0	5.0
Cape Agulhas	90.1	0.7	1.4	7.8
Swellendam	85.1	3.4	2.3	9.2

Source: Quantec Research, 2015

In 2014, 92.9 per cent of households had access to flush toilets (connected to sewerage/septic tank), the highest within the Overberg District. Approximately 2.1 per cent of households made use of bucket and pit latrines.

## 6.5 Housing

Decent housing with the relevant basic services is essential for human security, dignity and well-being.

**Table 16 Overberg District: Types of housing structures, 2014**

Municipality	House or brick structure on a separate stand or yard	Traditional dwelling	Flat in a block of flats	Town/cluster/semi-detached house (simplex, duplex or triplex)	House/flat/room in backyard	Informal dwelling/shack in backyard	Informal dwelling/shack NOT in backyard, e.g. in an informal/squatter settlement	Room/flatlet not in backyard but on a shared property	Other
Overberg District	73.70	1.3	2.3	3.5	1.2	5.0	10.7	0.4	1.8
Theewaterskloof	70.6	1.7	3.3	3.9	1.3	4.6	11.8	0.4	2.4
Overstrand	73.4	1.3	2.3	2.5	1.3	7.2	10.3	0.3	1.5
Cape Agulhas	78.6	0.7	1.5	2.1	1.5	1.5	12.1	0.6	1.5
Swellendam	79.2	0.6	0.7	6.6	0.7	3.6	6.8	0.8	1.0

Source: Quantec Research, 2015

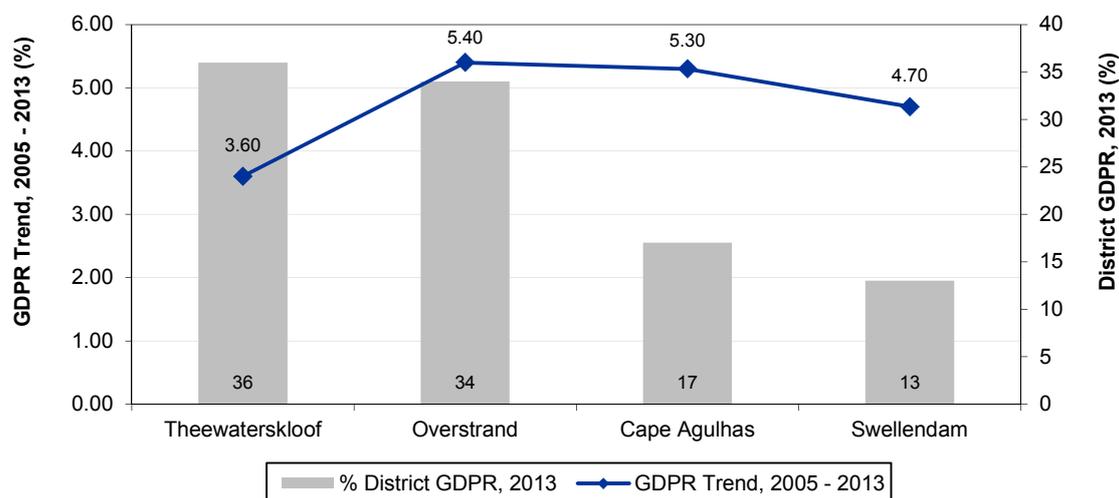

Table 16 highlights the most common dwellings in Overstrand Municipality were: House or brick structure on a separate stand (73.4 per cent), Informal dwellings in an informal/squatter camp (10.3 per cent), informal dwellings/shack in backyard (7.2 per cent) and town/cluster/semi-detached house/duplex (2.5 per cent).

## 7. Economy

Economic growth in South Africa has been deteriorating since 2012. GDP growth of 2.5 per cent, 2.2 per cent and 1.5 per cent was achieved in 2012, 2013 and 2014 respectively. Initiatives to bolster economic growth on a national scale have been undertaken and progress has been made - talks to establish a more sustainable labour relations environment have been undertaken, and administrative reforms to reduce red tape have been implemented. Key structural issues which hinder the desired growth levels nevertheless remain in place. Given the close linkages between the municipalities in the Province and the national economy, the metro and district (and thus local) municipalities in the Western Cape are impacted by current state and fluctuations in the national economy. The Overberg District grew by 4.6 per cent on average year-on-year from 2005 - 2013. The District managed to grow by 4.2 per cent per annum during the recessionary period (2008 - 2009); while experiencing a lower growth rate of 3.4 per cent per annum during the recovery period (2010 - 2013). The District has not yet managed to revert back to its 2005 - 2013 trend growth rate.

The Overstrand's relative contribution to the OBD's GDP and employment is equivalent to that of the Theewaterskloof Municipality, i.e. 34 per cent of GDP (or R4.6 billion of R13.3 billion) and one third of employment (or 25 200 workers out of 76 220) in all in the Overberg. Boosted by a relatively larger and rapidly expanding commercial services sector, where tourism activities also feature strongly, Overstrand has been able to post strong real GDP growth, averaging 5.4 per cent per annum from 2005 - 2013.

**Figure 6 Overberg District municipalities: GDP growth, 2005 - 2013**

Source: *Municipal Economic Review and Outlook (MERO), 2015*

As per Table 17, Overstrand's growth tapered down to 4.4 per cent per annum during the recession and dropped further to 3.9 per cent during the recovery period.

**Table 17 Overberg District: GDPR growth, 2000 - 2013**

Municipality	Real GDPR growth (average yoy %)		
	Expansion	Recession	Recovery
	2000 - 2007	2008 - 2009	2010 - 2013
Overberg District	5.7	4.2	3.4
Theewaterskloof	4.1	3.8	2.6
Overstrand	7.9	4.4	3.9
Cape Agulhas	6.2	5.2	3.6
Swellendam	5.2	3.4	3.9

Source: Municipal Economic Review and Outlook (MERO), 2015

This growth is underscored by significant variation in industry-specific growth rates. Growth in a particular industry depends on a number of factors (economies of scale, technological developments and demand trends among others) which often diverge among industries. Table 18 displays the industry-specific growth rates for each municipality in the Overberg District.

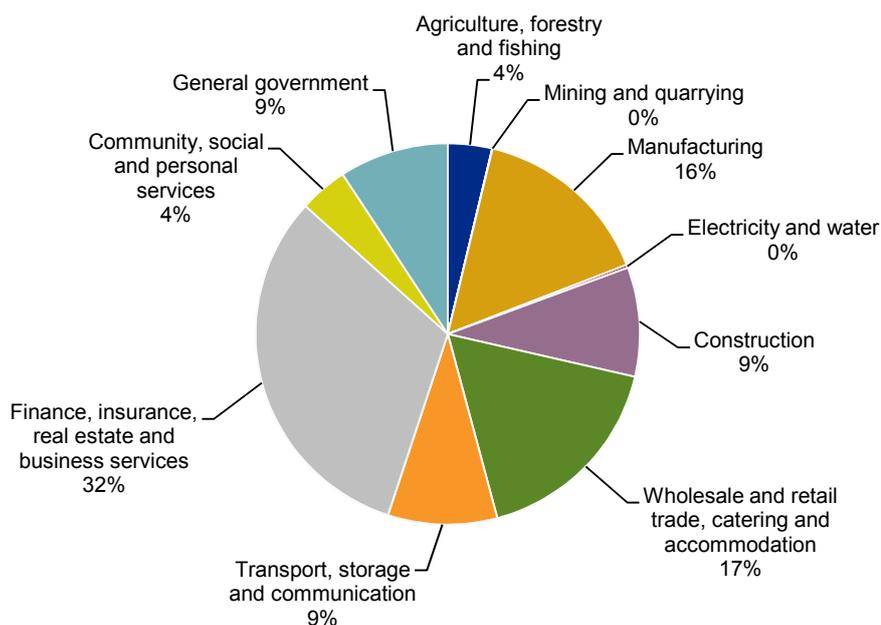

**Table 18 Overberg District: Sectoral growth, 2005 - 2013**

Industry	Theewaterskloof	Overstrand	Cape Agulhas	Swellendam	Overberg District
Agriculture, forestry and fishing	-0.1	0	2.1	-2.9	-0.3
Manufacturing	3.8	4.6	5.7	8.6	5
Construction	8.5	7.1	8.6	8.7	7.9
Commercial services	6.7	6.3	4.7	6	6.2
General government and Community, social and personal services	-0.4	4.3	6.4	3.8	3.3
Other	-1	-5.7	0.4	3.5	-0.1
<b>Total</b>	<b>3.6</b>	<b>5.4</b>	<b>5.3</b>	<b>4.7</b>	<b>4.6</b>

Source: Municipal Economic Review and Outlook (MERO), 2015

Overall, Overstrand has been the fastest growing municipality in the region. The second fastest growing municipality was Cape Agulhas (5.3 per cent per annum). All the municipalities experienced positive growth rates above 3.0 per cent, supported by strong growth in their commercial services, construction and manufacturing sectors.

Overstrand's commercial services sector experienced robust growth at a rate of 6.3 per cent per annum and construction was its fastest growing sector at 7.1 per cent per annum. The only sector in Overstrand which contracted was other (mining and quarrying, electricity and water), shrinking by 5.7 per cent per annum (the most severe contraction in the District).

**Figure 7 Overstrand: Sectoral composition, 2013**

Source: Municipal Economic Review and Outlook (MERO), 2015

The industry structure of the Overstrand economy reveals a notably bigger share of the finance, insurance, real estate and business services (32 per cent), wholesale and retail trade, catering and accommodation (17 per cent) and manufacturing (16 per cent). General government, transport, storage and communication as well as construction are also important at 9 percentage share each.

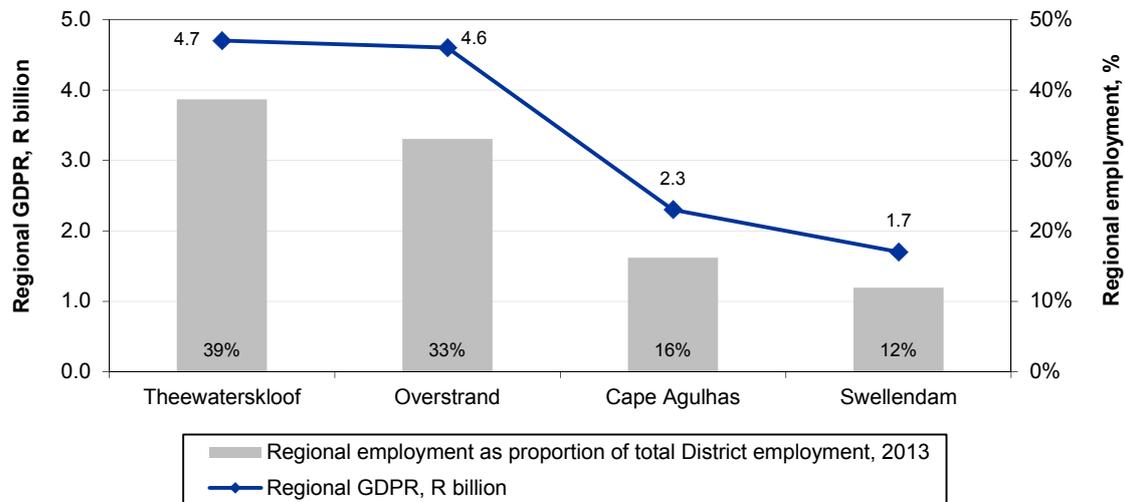

## 8. Labour market

Unemployment remains one of South Africa's biggest challenges. Overall unemployment (as per the narrow definition) stood at 25 per cent as at the end of 2014. Skills shortages, weak economic growth and electricity supply constraints are among the most significant constraints on employment growth. The NDP aims to reduce unemployment to 6 per cent by 2030. Improvements in education and training are integral to the attainment of this goal. These issues are structural and are felt at a local government level, where high levels of unemployment put significant strain on municipal funds.

The OBD economy is the second smallest regional economy in the Western Cape, contributing an estimated R13.3 billion (or 3.1 per cent) of the provincial GDP of R462 billion in 2014. The region employed an estimated 76 220 (or 4.1 per cent) workers of the provincial workforce.

Overstrand comprised 34 per cent of the GDP and 33 per cent of the employment in the District in 2013. Figure 8 show that Overstrand, together with Theewaterskloof employed 72 per cent of the District's working population. Swellendam has the smallest economy (comprising only 12 per cent of the District's GDP in 2013) and employed only 12 per cent of the District's working population.

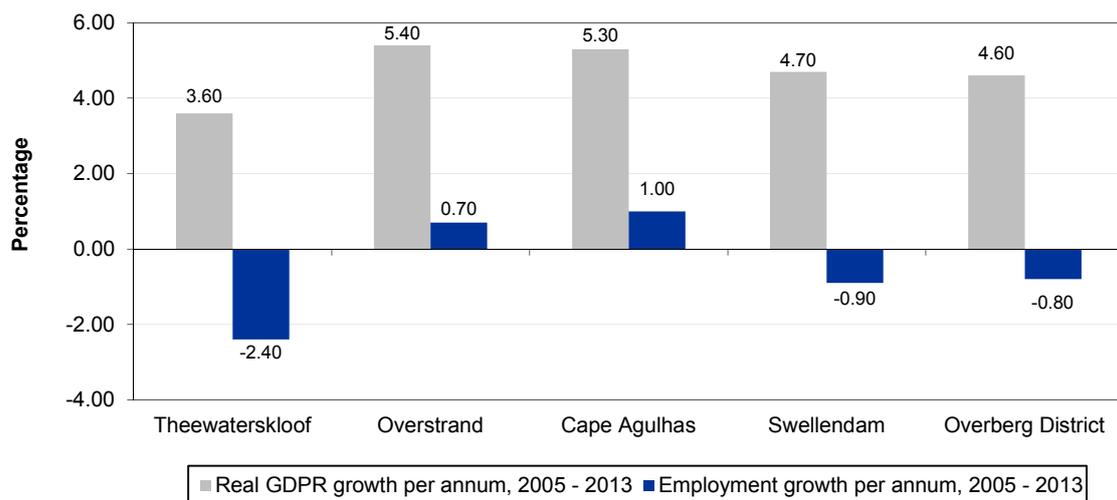

**Figure 8 Overberg District municipalities: Municipal GDPR vs municipal employment, 2013**

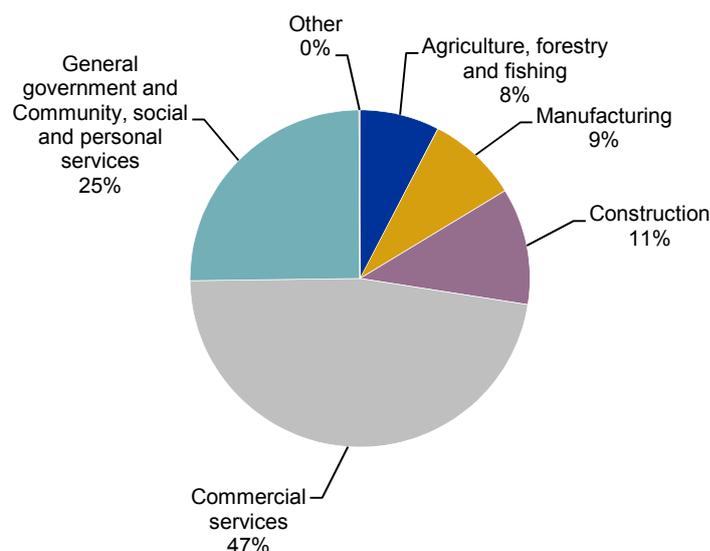

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Figure 9 provides a comparison of the annual municipal GDPR growth rate and annual employment growth rate in the District. Whilst all the municipalities in the District displayed a positive annual GDPR growth rate from 2005 - 2013, Overstrand and Cape Agulhas also experienced a positive annual employment rate over the period. Overstrand achieved 0.7 per cent employment growth annually over the 2005 - 2013 period, exceeding the District average of -0.8 per cent. The average annual employment growth rate in Cape Agulhas was 1.0 per cent whilst. Theewaterskloof and Swellendam had employment losses of 2.4 and 0.9 per cent respectively, from 2005 - 2013.

**Figure 9 Overberg District: Municipal GDPR vs municipal employment, 2005 - 2013**

Source: *Municipal Economic Review and Outlook (MERO), 2015*

**Figure 10 Overstrand: Employment by sector, 2013**

Source: Municipal Economic Review and Outlook (MERO), 2015

Figure 10, illustrates that the commercial services sector is the largest employer in Overstrand, employing 47 per cent of the working population in 2013, followed by the general government and community, social and personal (CSP) services sector, which employed 25 per cent. The construction sector was also among the top employers, employing 11 per cent of the Municipality's working population.

Overstrand Municipality experienced net job losses in agriculture, manufacturing, construction and other sectors. Conversely, commercial services and general government and CSP services experienced net employment, allowing a positive overall net employment of 1 437 in the municipal area.

**Table 19 Overberg District: GDPR growth vs net employment, 2005 - 2013**

Industry	Theewaterskloof		Overstrand		Cape Agulhas		Swellendam		Overberg District	
	GDPR trend	Net employment	GDPR trend	Net employment	GDPR trend	Net employment	GDPR trend	Net employment	GDPR trend	Net employment
Agriculture, forestry and fishing	-0.1%	-8 382	0.0%	-1 804	2.1%	-724	-2.9%	-2 184	-0.3%	-13 097
Manufacturing	3.8%	-85	4.6%	-92	5.7%	4	8.6%	169	5.0%	-4
Construction	8.5%	-189	7.1%	-625	8.6%	-112	8.7%	-47	7.9%	-978

Source: Municipal Economic Review and Outlook (MERO), 2015

Overstrand experienced an increase in labour demand in the categories of highly skilled, skilled and informal employment; semi- and unskilled sector on the other hand registered a decrease in demand. The demand for highly skilled labour grew at 2.3 per cent per annum, while demand for skilled labour increased by 1.1 per cent per annum.

**Table 20 Overberg District municipalities: Employment per skills sector, 2005 - 2013**

Sector composition	Theewaterskloof		Overstrand		Cape Agulhas		Swellendam	
	Number	Growth p.a. 2005 - 2013	Number	Growth p.a. 2005 - 2013	Number	Growth p.a. 2005 - 2013	Number	Growth p.a. 2005 - 2013
Highly skilled	3 019	0.3%	2 962	2.3%	1 808	3.3%	1 012	1.4%
Skilled	7 329	-0.1%	8 093	1.1%	3 791	1.3%	2 602	0.6%
Semi- and unskilled	13 074	-5.6%	7 592	-2.8%	4 056	-1.8%	3 031	-5.5%
Informal	6 054	3.3%	6 541	5%	2 690	4.3%	2 448	5.8%
<b>Total employment</b>	<b>29 475</b>	<b>-2.4%</b>	<b>25 187</b>	<b>0.7%</b>	<b>12 344</b>	<b>1%</b>	<b>9 092</b>	<b>-0.9%</b>

Source: *Municipal Economic Review and Outlook (MERO), 2015*

Demand for semi- and unskilled labour contracted by 2.8 per cent per annum. This pattern is prevalent across the District, with the majority of the job losses emanating from the semi- and unskilled sector. The job losses are congruent with the job losses experienced in the agricultural, manufacturing and construction sectors, and represent an increasing trend in the demand for skilled employment (and thus employment in the tertiary sector) over unskilled labour.

## 9. Environment

The 2011 National Strategy for Sustainable Development for South Africa describes the concept of sustainability as composing of three overlapping developmental spheres namely, the natural environment, social context and economic activity. These spheres, which are underpinned by a system of governance, are interlinked and fully dependent on the extent and functionality of the others. A trade-off in one sphere will compromise the functionality of another with significant knock-on effects.

The natural environment, inclusive of elements such as land, inland water, biodiversity and oceans and coastlines are increasingly under pressure as a result of certain socio-economic factors such as population growth rates and increased land use. These pressures on natural resources also pose limitations to economic growth. Climate change also poses significant bio-physical and economic risks and as such, sustainable and effective resource-use and climate change response, should be both a Provincial as well as Municipal strategic priority.

The Environmental section outlines key focus areas relevant to the current state of the natural environment and the associated need for environmental management, specifically, within the sphere of local government. These broad focus areas – legislative reform, integrated waste management, climate change – are briefly discussed in the following section and where available, include a municipal specific overview.

This information is intended to strengthen municipal planning support, inform future budget allocations and promote resource efficiency and effectiveness to ultimately preserve the natural environment for future generations.

## **9.1 Law reform - Implementation of SPLUMA/LUPA in municipalities**

It is paramount that municipalities have planning and decision-making mechanisms in place to support its service delivery obligations and growth objectives. The Spatial Planning and Land Use Management Act, Act No. 16 of 2013 (SPLUMA), implemented on 1 July 2015, and the Western Cape Land Use Planning Act 2014 (LUPA) ushers in a new era of planning and development decision-making where the responsibility rests largely on local municipalities to fulfil their role as land use planning decision-makers as per Constitutional mandates and obligations. Section 24(1) of SPLUMA determines that a municipality must, after consultation as prescribed in the Act, adopt and approve a single land use scheme for its entire area within five years from the commencement of this Act.

This land use scheme serves as a tool for municipalities to guide and manage development according to their vision in terms of its Integrated Development Plan (IDP) and Spatial Development Framework (SDF). This will provide potential developers and land users with a clear indication of developable land and its associated land uses within the municipal space. Clarity in land use zones can avoid any future confusion and lengthy delays in terms of prospective developments/uses.

Currently many municipalities have a Land Use Management Scheme in place in the form of Zoning Schemes, which are compliant with the provisions of the Land Use Planning Ordinance, 1985 (Ordinance 15 of 1985) (LUPO). These are known as LUPO section 7 and 8 Schemes. The process has commenced to replace these schemes to meet the requirements for Integrated Zoning Schemes (Land Use Schemes) in terms of section 24 of SPLUMA.

Overstrand Municipality has not taken any steps towards the implementation of LUPA. Overstrand Municipality promulgated an integrated zoning scheme on 29 November 2013 in terms of section 24(1) of SPLUMA, which came into effect on 1 January 2014.

## **9.2 From waste management to integrated waste management**

There is a shortage of available landfill airspace across the Province. The recovery of waste material for the waste economy is only at 9 per cent. There is a big need to move away from the landfill bias to integrated waste management. To achieve this, more integrated waste management infrastructure is urgently needed. This will increase the recovery of waste material and thereby save landfill airspace, promote the waste economy, reduce the environmental impacts of waste management and create jobs. A mind shift also is needed from municipalities to move away from seeing waste just as a nuisance and risk to realise the intrinsic value of waste and to utilise the potential value of it.

Due to the landfill airspace shortage, municipalities are exploring regional waste disposal options. Such options are however costly due to the high transport cost. The effective management of such regional facilities is also problematic due to the multi-party involvement. These regional facilities have to be operated by the district municipalities and unfortunately these municipalities do not receive any MIG Funding,

which makes these facilities difficult to construct and operate. However, regionalisation of not just waste disposal facilities, but integrated waste management facilities have to be encouraged and alternative business cases such as private public ventures have to be explored.

All the waste disposal facilities except one (application to obtain a waste management licence is currently in process) have waste management licences. Since 2013 the requirements for landfill operation has increased dramatically, therefore making it difficult and very expensive for municipalities to comply with. The compliance of landfills in the Province has to increase dramatically which means that more resources are needed to meet the new legislative requirements. The majority of the landfills in the Province have by now reached full capacity must be closed and rehabilitated. Due to the strict environmental requirements set by the national government for closure and rehabilitation of waste disposal facilities, it is very expensive to comply and municipalities find them in the difficult position that it does not have the necessary resources to rehabilitate these facilities.

Cost reflective waste tariffs are in general not charged by municipalities and combined with the high level of poverty with people who cannot afford high service charges, impacts negatively on the sustainability of the waste management service. Waste management should also be regarded as bulk infrastructure. If not, it further puts this service at a funding disadvantage. This is a perception that must be changed urgently so that waste management can also benefit equally from government funding for development and building of houses.

In general, the skill levels of municipal waste managers should be improved as well as the staff capacity available to render an effective and efficient waste management service. A further priority area for municipalities is to either align its waste management by-laws with national legislation or to publish a waste management by-law which will assist in the management of this service and facilitate interaction with the private sector to improve service delivery and to benefit from the waste economy and job creation.

### **9.3 Climate change**

The science of human-caused climate change is undisputable. The average global temperature has already increased by 0.8°C; at this rate we are on track to reach a 4°C global average warming by 2100. Evidence suggests Africa is warming faster than the global average which is having severe impacts for hard-won developmental gains across an already vulnerable continent. Climate change impacts are already evident in the Western Cape and are negatively impacting and undermining economic and social development. Infrastructure, basic resources (water, food and energy) and livelihoods will all be impacted on and these impacts will affect all sectors and stakeholders, with a particular impact on the poor and vulnerable sectors of our community. Substantial responses are required by all role-players in order to adapt to the changes that will be experienced.

To date, the implementation of climate change responses to this changed climate has been slow. Many stakeholders do not perceive that it is their responsibility or mandate to prepare for climate change, and state limited resources and the delivery of other basic services as a challenge. Climate change is everyone's business and has to be incorporated into every facet of spatial and land use planning, service delivery, infrastructure development and economic planning. Failure would compromise basic service delivery, exacerbate poverty and undermine the most vulnerable communities.

The following are some recent observed trends in the Western Cape:

Climate Variable	Observed trends	Outlook and Comments
Temperature	<p>General trend of rising temperatures, including both minimum and maximum temperatures.</p> <p>Increased temperatures and increased evapotranspiration result in dry soils and vegetation which becomes more readily fire-prone.</p> <p>Tuesday March 3<sup>rd</sup> 2015 was the highest temperature ever recorded (in 100 years) in Cape Town at 42°C. This coincided with severe fires.</p>	<p>For example there has been a decrease in the number of very cold days to create the cold (or chill) units required for deciduous fruit cultivars to grow.</p> <p>Number and intensity of fires seem to be on the increase. Disaster funds for fires will need to increase, but more importantly proactive protection of ecosystems and water is the required long term response.</p>
Precipitation (Rain, snow)	<p>Reduction in rain days in autumn and summer especially on the Southern Coast.</p> <p>Evidence of a trend in increasing severity of rainfall events (i.e. more rain falls in a shorter time).</p> <p>Winter rainfall season starting later each year.</p> <p>Anecdotal information of reduction of winter snow in Karoo – may result in decreased groundwater recharge. Current status unknown.</p>	<p>City of Cape Town responding with increase flood preparedness plans in winter, and increasing standard requirements for storm water flows in infrastructure.</p> <p>Late onset of rainfall in winter of 2015 was very close to causing a major problem for wheat farmers (documented in SmartAgri Status Quo Assessment – DOA and DEADP).</p>
Wind	<p>Wind velocity expected to increase, with stronger South Easterly. Impacts currently unknown.</p>	<p>Impacts on tourism: e.g. Table Mountain cable car operations, Robben Island ferry operations, beach usability etc.</p>
Sea level rise	<p>Sea level has been rising at the same rate as global trends. See discussion on 'sea storm surges' below.</p>	<p>There is global concern that previous estimates of the rates of sea level rise may have been too optimistic, and that decision makers need to be aware that worst case scenarios in this century may be possible.</p>

Climate Variable	Observed trends	Outlook and Comments
Ocean temperature	The Agulhas current has warmed by 1.5°C since 1980. Changes in the distributional range of fish and other marine species. Climate change is also responsible for shifts in the distribution of the Overberg District rock lobster. However the full understanding of these changes is complex and cannot necessarily all be attributed to a changing climate. <sup>6</sup>	Impacts of shifting marine resources have implications for social and economic fabric of coastal communities.
Ocean Acidification <sup>7</sup>	Ocean acidification would have severe impacts on most ocean life. Currently the ocean has already acidified by 0.1 pH points as a global average (this varies from region to region).	Current impacts not evidently well described.

Between 2003 and 2008, direct damage (predominantly from floods and drought in the Eden and Central Karoo Districts), caused approximately R3 billion of damage in the Western Cape. If not closely monitored and managed, above variables could potentially cause other severe natural disasters which will be detrimental to human life. These include:

Climate Variable	Observed trends	Outlook and Comments
Floods/Droughts	Numerous flood and drought events have occurred in the Western Cape in the past decades with frequency seeming to increase. Difficult to determine if these are all attributable to a changing climate, but likely, given similar trends globally.  There is currently a drought in the north of South Africa which is impacting sugar and maize commodities. The Central Karoo might be entering a drought scenario (although some climate responses such as the water reuse plant in Beaufort West might be reducing these impacts currently).	ALERT: As at 20 September 2015) on the Western Cape had 72 per cent dam capacity at the end of the wet season (in 2014 it was 92 per cent of capacity).

<sup>6</sup> SAEON. 2011 Observations in Environmental Change in South Africa.

<sup>7</sup> As the ocean absorbs CO<sub>2</sub> its pH changes.

Climate Variable	Observed trends	Outlook and Comments
Sea Storm Surges (big storm events)	In the past 15 years various big storm events have caused infrastructure damage along the Western Cape coastline. Studies reflect sea level has risen on the Western Cape coastline in accordance with global trends. Most impacts are due to inappropriate coastal development.	Coastal municipalities potentially having a big role to play here. Insurance companies are starting to withdraw from some vulnerable coastal areas.
Fire	Observed increased fire incidences <sup>8</sup> and potential increase in extent and severity of fires. 2015 fires occurred in record breaking heat temperatures: Economic implications to the Tourism industry unknown; costs to CapeNature and SANParks not yet documented.	Challenging to differentiate how much of increase in fires and intensity is climate change related but global trends indicate climate change has a role to play. GLOBAL ALERTS: Fires in the USA and Canada in 2015 are unprecedented in scale and costs; also on the back of a prolonged drought.
Hail	There is anecdotal evidence that more hail storms are occurring in never before areas of the Western Cape, causing economic loses to agriculture (SmartAgri Status Quo Report).	Increase likelihood of hail storms is not well understood.

There is thus a unique opportunity in the immediate short term to radically shift our planning and infrastructure development to become climate resilient, and to reduce our greenhouse gas emissions that are directly driving the problem. The window of opportunity is however short and closing rapidly, implying that climate change response is urgent if the Western Cape aims to continue with a thriving local economy and to reducing inequality and poverty.

Current disaster funding approaches are not sufficient for responding to climate change. These funds are generally reactive. Disaster funding is often utilised to rebuild the exact same infrastructure in the exact same places. In order to respond effectively and responsibly to climate change all departments need to integrate climate change into infrastructure build, and planning, and to utilise standards appropriate for a changed climate regime. Furthermore, critical ecological infrastructure is required to support and buffer built infrastructure (such as dune barriers, wetlands and mountain catchments - our "natural water towers").

## 10. Broadband penetration

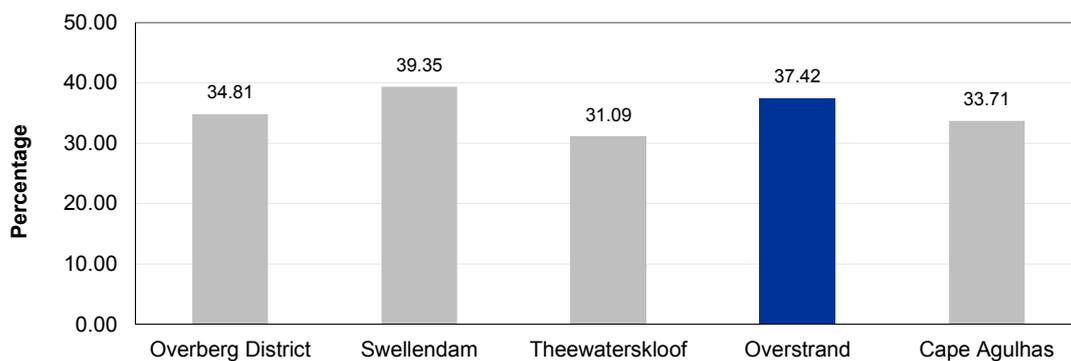

Broadband penetration offers immense economic benefits by fostering competition, encouraging innovation, developing human capital and by building infrastructure. Improved connectivity will attract new business and investments, reduce the cost of doing business and will offer small, medium and micro enterprises access to new markets.

The World Bank found that for every 10 per cent increase in broadband penetration in developing countries, there is an increase of 1.38 per cent in GDP growth. Municipal broadband initiatives (internet services provided by a municipality) also offer great potential for enhanced economic growth and development, provided they address the key pillars of access, readiness (skills) and usage (stimulating demand for the Internet).

Improved internet penetration and accessibility also offers direct benefits for local government entities to improve the efficiency and effectiveness of public services. These benefits include the roll-out of e-services that will allow for the online payment of municipal accounts, motor vehicle registrations, animal registrations, reporting of infrastructure defects, free indigent services applications, career applications as well as tender applications. Online feedback mechanisms via social media will also support the facilitation of public participation during the annual reporting process and will offer constituents a platform to express public satisfaction.

Greater connectivity will also allow public servants remote access to information such as previous traffic infringements, building plan applications and outstanding accounts, for example.

**Figure 11 Overberg District: Internet access, 2011**

Source: Statistics South Africa, Census 2011

In the Overberg District Municipality, 34.81 per cent of households had access to the internet in 2011. Overstrand Municipality compares favourably at 37.4 per cent and had the second highest penetration rate in the District. This rate offers great potential for economic growth by improving access, readiness and usage of the Internet within the Municipality.

In order to improve access and stimulate usage of the Internet, the Western Cape Broadband Initiative will be implementing Wi-Fi hotspots at a provincial government building in every ward across the Province over the next three years. These hotspots will allow limited free access (250 Mb per month) to any citizen, as well as allow all gov.za websites to be accessed free of charge. In the Overberg District Municipality, Wi-Fi hotspots will be installed in 46 wards in total, including a hotspot in each of the 13 wards in the Overstrand Municipality.

## 11. Concluding remarks

The socio-economic profile illustrates how the socio-economic environment impacts on the standard of living within the Municipality. The following points are of note in the analysis above:

- Overstrand ranks second in terms of population size within the Overberg District with a figure of 86 711 people in 2015. The total number of households in Overstrand Municipality is estimated to be 28 892 in 2015.
- Overstrand residents has a literacy rate of 87.5 per cent and a matric pass rate of 86.4 per cent in 2014.
- Poverty remains a challenge with 19.3 per cent of the households earn less than R400 a month in 2011 and a per capita income of R33 082.
- A high learner dropout rate which is particularly concerning given the low employment opportunities on offer for semi- and unskilled workers.
- The majority of schools in the Overstrand municipal area were at the end of 2014 no fee schools; the proportion of no fee schools has increased marginally from 70.58 per cent in 2012 to 70.60 per cent in 2014.
- The presence of FET colleges is encouraging as it can potentially absorb the high number of high-school dropouts and offer alternative education and training opportunities.
- Overstrand has a teenage birth rate of 6.0 per cent which was the lowest in the District and a termination of pregnancy rate of 12.4 per cent which was higher than the District's average of 7.0 per cent.
- By the end of March 2015, Overstrand's ART patient load increased to 2 948, administered from 4 treatment sites.
- Overstrand municipal area outperforms the District in terms of access to water, sanitation and refuse. Access to electricity is slightly below the District average access levels.
- Overall, Overstrand Municipality appears to be affected by drug-related crime and residential burglaries.

- Overstrand comprised 34 per cent of the GDP and 33 per cent of the employment in the District in 2013. Overstrand has been able to post strong real GDP growth, averaging 5.4 per cent per annum between 2005 and 2013.
- The industry structure of the regional economy reveals a notably bigger share of the finance, insurance, real estate and business services, wholesale and retail trade, catering and accommodation and manufacturing.
- Overstrand experienced net job losses in the agriculture, manufacturing, construction and other sectors. Conversely, the commercial services and general government and CSP services sectors experienced net employment, allowing a positive overall net employment of 1 437 in the municipal area.
- Overstrand experienced an increase in labour demand in the categories of highly skilled, skilled and informal employment; semi- and unskilled sector on the other hand registered a decrease in demand.
- Overstrand has a Wi-Fi access level of 37.4 per cent. Increased access, readiness and usage of internet would offer greater potential for economic growth in the Municipality. There is also Wi-Fi provided by the provincial government in each of the wards in the municipal area.

Addressing the issues mentioned above may serve to improve the socio-economic environment for the inhabitants of the Overstrand Municipality.
