Setting Your Low Carbon Emissions Path

Local Government Your Sustainable Energy Plan

Did you know?

LED traffic lights... powered by the sun

One traffic intersection uses as much power during a month as a **three bedroom house**.

Changing traffic halogen lights to light-emitting diode (LED) lights results in **7x less energy** being used and a LED **lifespan of 5 years**, rather than 3 months.

Retrofitting homes and raising awareness

All over the province, homes are being retrofitted with solar water heaters, water efficient showers, taps and drains, ceilings and ceiling insulation and energy-efficient lighting.
