Changing the game to enrich communities

From the editor

The end of 2018 is fast approaching, with the game changers continuing to deliver results for citizens on the ground.

This month we are celebrating the some of the successes we have achieved with a game changer exhibition.

Game Changer exhibition at 7 Wale street concourse

The Delivery Support Unit is currently holding a Game Changer exhibition in the concourse of the Provincial Legislature at 7 Wale Street.

The exhibition showcases the many interventions that have been driven under each of the Game Changers:

- Expanding Apprenticeships
- Implementing quality eLearning at schools
- Expanding quality After School programmes
- Achieving Energy Security
- Reducing Alcohol Related Harms

- Delivering High Speed Broadband
- Pioneering an affordable integrated housing project called the Conradie Better Living Model

The exhibits also highlight the successes we have achieved so far.

It also includes an update on the provincial government's economic growth and job creation strategy - Project Khulisa.

The exhibition will run until Friday, 7 December and we encourage officials to come and have a look.

After School leadership excellence award

Mr Terence Adams, principal of Grosvenor Primary School in Atlantis, was awarded Gold in the Leadership Excellence in After School programming category at the recent provincial ceremony of the National Teaching Awards.

In its third year of being presented, this special ministerial award recognises principals who have opened their schools to embrace a range of after school activities and ensure their learners reach their full potential.

These ideally include a mix of sport, arts and culture, academic support and life skills programmes creating opportunities for every learner.

Grosvenor Primary offers exactly this, a range of programmes run by enthusiastic teachers and external partners.

Mr Adams works tirelessly to continue adding new activities, so all learners are enticed to participate regularly in after school programmes.

He has also focused on getting parents more involved in ensuring the success of the school. For example, he has initiated termly karaoke evenings, which raise funds and encourages parent buy-in.

7416

learners have completed apprenticeships

The Apprenticeship Game Changer is focused on increasing the number of qualified technical and vocationally skilled people to meet the needs of our prioritised economic growth sectors, namely Tourism, Oil and Gas, Agri-processing, ICT and Renewable Energy sector; by 2019.

The target is set for 11 037 learners entering workplace based training opportunities and 13 221 qualified apprentices entering the labour market.

We have been running career awareness campaigns in our Technical High and Maths and Science Schools and have also been working with Employers to create more workplace based learning opportunities.

9 339 learners have entered work place based learning including apprenticeships and 7 416 learners have successfully qualified by September 2018.

Green Home Checklist launched

This week the Energy Security Game Changer is launching an online checklist, which citizens can use to see how green their homes are.

The checklist asks a series of questions about what type of water and energy efficiency measures have been installed in your home.

It also provides resource efficiency tips to help citizens make their homes more green so they can save electricity, water and money.

We encourage officials to use the checklist, which can be found [here](#) and to share it with their families, friends and neighbours.
