Variable List

Period of data extraction: 1 April 2024 – 30 September 2024.

Data is requested from the following facilities:

1. Mitchell's Plain Community Health Centre (CHC)
2. Gugulethu CHC
3. Hanover Park CHC
4. Crossroads Community Day Centre (CDC)
5. Inzame Zabantu CDC
6. Heideveld CDC
7. Dr. Abdurahman CDC
8. Nyanga CDC

Patients 18 years and older, on the following ARV regimes are required:

1. Tenofovir/lamivudine/dolutegravir
2. Abacavir/ lamivudine/dolutegravir
3. Atazanavir/ritonavir-based regimens

For each patient selected above the following variables are needed:

1. Gender
2. Age
3. Start date on ARVs
4. Co-morbidities present –
    a. Hypertension
    b. Diabetes
    c. Asthma/COAD
    d. Epilepsy
    e. Mental health disorder
    f. Arthritis
5. Lab investigations
    a. Viral load
    b. Creatinine
    c. eGFR

There are potentially 1000s of patients on those ARV regimes. The study only requires 70 patients per facility. It is understandable if you are only able to provide me with a percentage of eligible patients.
