

WILDFIRE READY: PREPARE YOUR PROPERTY

Reducing the vegetation (Fuel) on your property and its proximity to your structures will reduce the risk of damage or loss from wildfires.

FIREBREAKS

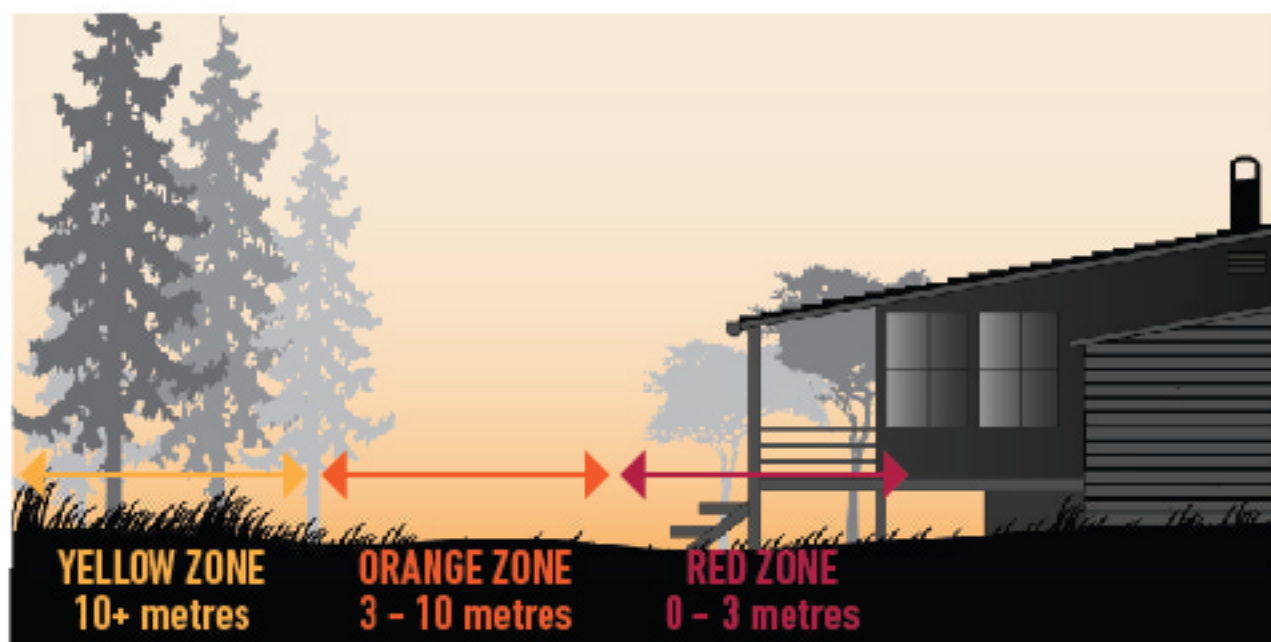

These allow Fire Services to gain access to the fireline and can sometimes assist with slowing the spread of wildfire depending on the conditions and environment.

DEFENDABLE SPACE

This is the buffer zone created around your home and other structures to limit the damage that can be caused by spread of a wildfire.

LADDER FUELS

This is any vegetation below a tree that will allow a fire to climb up into the tree canopy. Reduce the risk of fire climbing trees by removing these.

Manage your Vegetation, Manage your Risk.

Wildfire is Coming Are you #WildfireReady?
